

Offshore Davit Crane Inspection, Upgrade & Maintenance Campaign

Objective

Aurora Energy Services was engaged to support a specialist campaign involving offshore davit crane systems across a sensitive UK offshore site. Aurora mobilised suitably qualified personnel and supported safe and efficient delivery within a live offshore environment. The campaign combined specialist technical capability, offshore competence and project coordination. Client, end-customer, asset and precise location details must remain confidential.

Our Solution

- Specialist offshore resource – suitably qualified and competent personnel with relevant technical and offshore experience.
- Responsive tooling & materials procurement – rapidly sourcing, procuring and expediting the specialist tooling, equipment and materials required as the project evolved, helping ensure offshore teams had what they needed to maintain progress.
- Safe and controlled execution – delivery in line with offshore safety and operational requirements, with focus on quality, compliance and efficiency.

At a Glance

Challenges

Restricted offshore access and mobilisation windows; weather and marine conditions; coordination with wider offshore operations; safety-critical lifting equipment; availability and movement of specialist personnel; and strict control of information due to the sensitive nature of the site.

Value to client

Aurora provided a dependable delivery partner for a specialist offshore lifting campaign, combining experienced offshore personnel with coordinated project tooling and material delivery. This reduced the client's management burden, supported safe execution in a complex environment and provided a flexible, scalable model for future offshore crane and lifting campaigns.
