

Marpac - Tracheostomy Tube Holders

Quality you can rely on, because not all patients are the same.

CCMed are proud to represent **Marpac**, leaders in airway securement, providing security, comfort and peace of mind.

- All products are latex free and have the option of a Bulk (B) box of 100pcs. Ideal for the ward, reducing ordering, packaging, storage, freight and carbon emissions.
- Marpac is produced in a purpose-built facility in the USA, by a dedicated team of highly skilled machinists. No robots here!
- All areas of the business, including design, production, inspection, packing and shipping are done in-house, ensuring their consistent high quality.
- Don't forget our special **Custom Service**. If you have a patient with a particular need, do let us know and we will work with you to add comfort and airway securement to all tracheostomy patients.

Paediatric One-Piece Tracheostomy Tube Holder.

Paediatric (105) - available in boxes of 25 or 100pcs

The Marpac 105 is a paediatric, one-piece tracheostomy tube holder that fits an 8" to 12" neck.

The holder has narrowed ends to the holder body. These ends thread the tube flange to avoid rubbing of the Velcro in the eyelets/skin, whilst acting as a cushioning pad for the tracheostomy tube eyelets.

Like all of the Marpac range, the 105 features a soft cotton backed foam laminate, enabling the skin to breathe whilst providing added comfort for the patient.

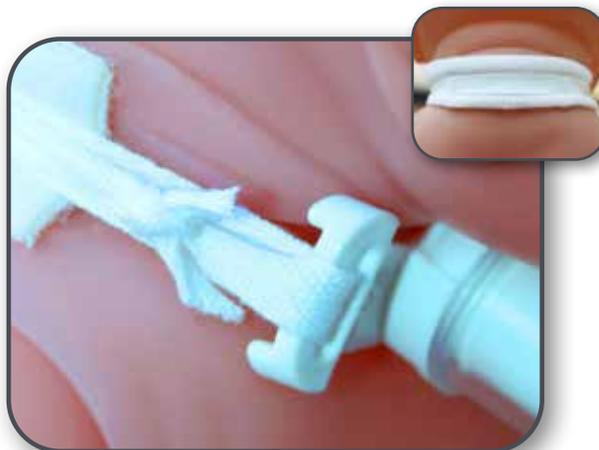

Neonatal/Paediatric one-piece, adjustable twill-ONLY tracheostomy ties. No Velcro.

Neonatal (106), Paediatric (107) - available in boxes of 25 or 100pcs

The Marpac 106 and 107 are one-piece tube holders made with a smooth, comfortably padded foam laminate collar and extra-long cotton twill. THERE IS NO VELCRO WITH THESE PRODUCTS.

The ties can be adjusted and are the ideal securement device when comfort and security are paramount. Particularly popular for patients using a silicone tracheostomy tube, following the MHRA's notice (MDA/2012/062) warning against the use of hook and loop ties with silicone tubes.

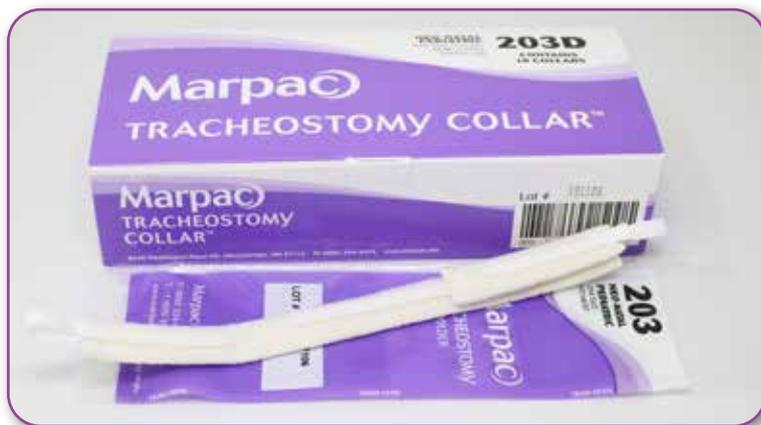

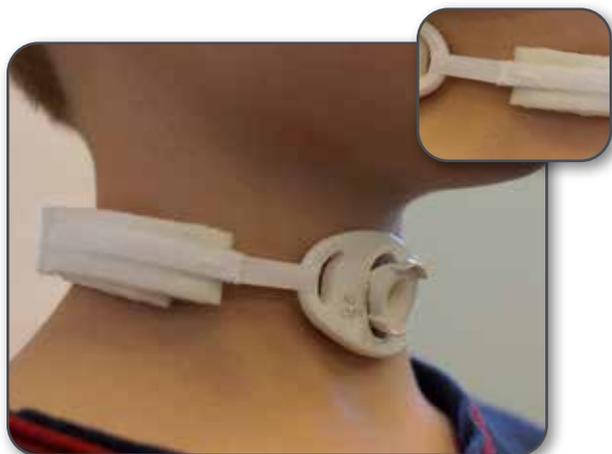

Neonatal/Paediatric adjustable tracheostomy tie with Velcro & twill.

Neonatal/Paediatric (203) - available in boxes of 10 or 100pcs

Unique to the Marpac range, the 203 is a popular two-piece adjustable tie often used in both the hospital and community setting.

It features a special rounded Velcro/twill hybrid fastener, offering the convenience of Velcro but with the soft cotton twill sitting in the eyelets of the tube. This helps to avoid possible damage to the soft eyelets of silicone tubes that can be caused by movement, whilst also enabling the tube to sit flatter on the neck, making it even more comfortable for the patient.

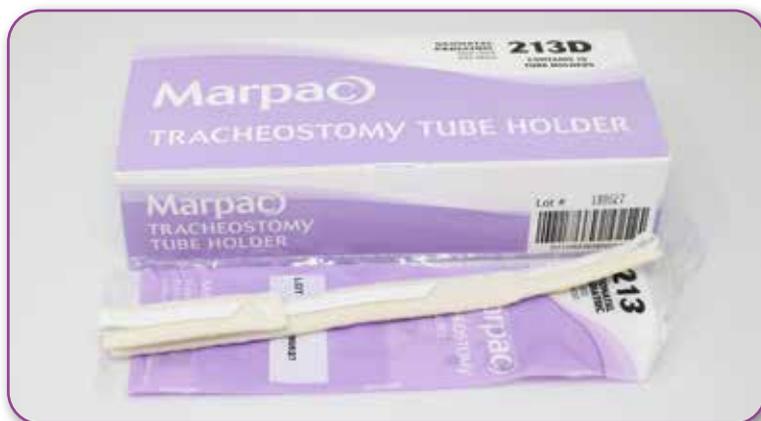

Neonatal/Paediatric adjustable tracheostomy tie with a standard hook & loop fastener and tapered ends.

Neonatal/Paediatric (213) - available in boxes of 10 or 100pcs

The 213 is Marpac's standard airway securement device for paediatrics.

Built with an adjustable, padded, comfortable foam collar, the 213 is secured via a standard hook & loop fastener with tapered ends, for ease of threading through the eyelets of the tracheostomy tube.

The foam laminate is also cut and sealed with rounded edges for added comfort.

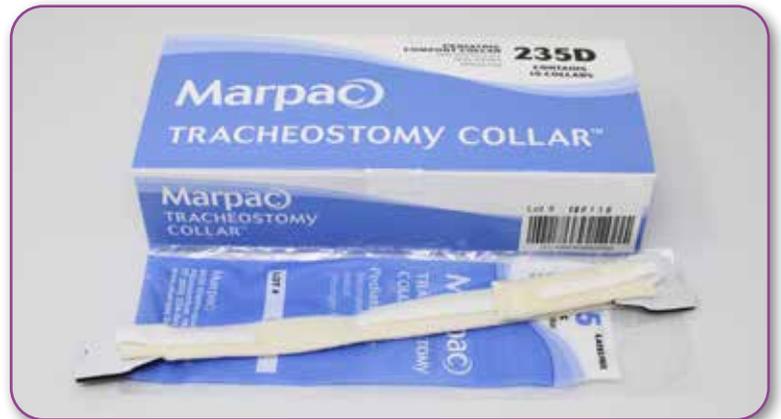

Paediatric adjustable tracheostomy tie with integrated pad and Velcro.

Paediatric Comfort Collar (235) - available in boxes of 10 or 100pcs

Developed in conjunction with the renowned Nationwide Children's Hospital in the USA, the comfort collar is a special, adjustable tie with a Velcro fastener and an integrated pad that sits under the tube flanges.

The addition of such a pad has been shown to help avoid possible pressure points caused by tube flanges¹. Such pressure points can develop into significant sores that can be a real challenge to resolve.
