

Marpac™ - Tracheostomy Tube Holders

A full range of adult tracheostomy ties for the ward and community, because not all patients are the same.

CCMed are proud to represent **Marpac**, leaders in airway securement, providing security, comfort and peace of mind.

- All products are latex free and have the option of a Bulk (B) box of 100pcs. Ideal for the ward, whilst reducing ordering, packaging, storage, freight and carbon emissions.
- Marpac is produced in a purpose-built facility in the USA, by a dedicated team of highly skilled machinists. No robots here!
- All areas of the business, including design, production, inspection, packing and shipping are done in-house, ensuring their consistent high quality.
- Don't forget our special **Custom Service**. If you have a patient with a particular need, do let us know and we will work with you to add comfort and airway securement to all tracheostomy patients.

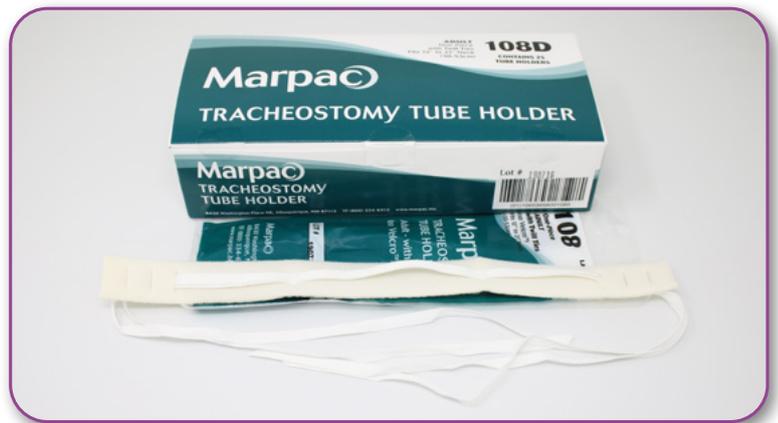

Adult/Large child one-piece adjustable tracheostomy tie with twill ONLY.

Adult (108) - available in boxes of 25 and 100pcs

The Marpac 108 is a one-piece tube holder made with a smooth, comfortable, padded foam laminate and extra-long cotton twill. THERE IS NO VELCRO WITH THIS PRODUCT.

The tie can be adjusted and is the ideal securement device for adults and larger children when comfort and additional security are paramount. Particularly popular for patients moving on from the paediatric 107 tie and those patients using a silicone tracheostomy tube, following the MHRA's notice (MDA/2012/062) warning against the use of hook and loop ties with silicone tubes due to the potential risk of decannulation.

Adult two-piece adjustable tracheostomy tie with Velcro & twill.

Adult (201) - available in boxes of 10 and 100pcs

Unique to the Marpac range, the 201 is a popular two-piece adjustable tie used in both the hospital and community setting. The box of 10pcs is available on prescription.

The 201 features a special Velcro/twill hybrid fastener, offering the convenience of Velcro but with the soft cotton twill sitting in the eyelets of the tube. This enables the tube to sit flatter on the neck, improving patient comfort. This feature also helps to avoid possible damage to the soft eyelets of silicone tubes.

Adult adjustable tracheostomy tie with narrowing foam and standard hook & loop fastener and tapered ends.

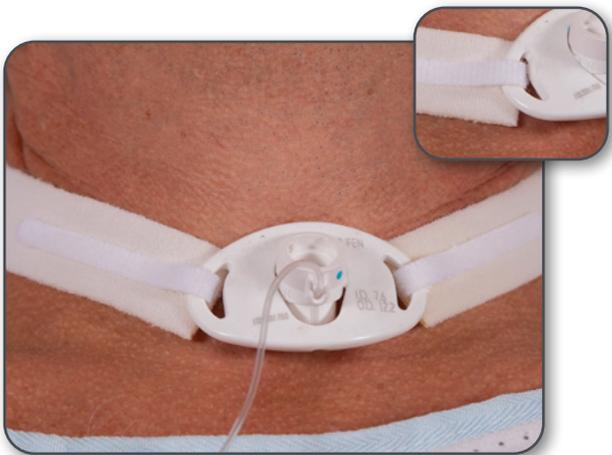

Adult (211) - available in boxes of 10 and 100pcs

The Marpac 211 is a two-piece tracheostomy tube holder with narrowing foam ends that thread easily through the eyelets of the tube. This comfortable, cushioned foam laminate is sealed, making it extremely comfortable for the patient, helping to reduce the risk of discomfort and skin breakdown.

The 211 is easily adjustable, fitting up to a 21.5" neck, and is secured via a standard hook & loop fastener.

Adult two-piece adjustable tracheostomy tie with Velcro fastener and rounded ends.

Adult (204) - available in boxes of 10 and 100pcs

The Marpac 204 is a premium quality Velcro-based adjustable tie. Unlike other similar ties, the Velcro has a soft backing, enabling it to be easily used with other devices (e.g. Marpac 900 circuit/ventilator anti-disconnect).

The 204 also offers great flexibility as it can be adjusted for nearly every neck up to 19". The whole product is designed with durability and comfort in mind, from the soft padded foam laminate to the sealed rounded edges and rounded soft-backed Velcro makes this device the ideal general purpose tie for the ward-based patient.

Adult two-piece adjustable tracheostomy tie with integrated pad and Velcro.

Adult Comfort Collar (230) - available in boxes of 10 and 100pcs

Developed in conjunction with the renowned Nationwide Hospital in the USA, the comfort collar is a more specialist collar designed for the more vulnerable patients, prone to skin breakdown. The Marpac 230 is an adjustable tie with a Velcro fastener and an additional integrated pad that sits under the tube flanges.

The addition of such a pad has been shown to help avoid possible pressure points that can be caused by tube flanges¹. In such cases these pressure points often develop into more significant sores that can be a real challenge to resolve.

Adult two-piece adjustable tracheostomy tie with standard hook & loop fastener and tapered ends.

Adult (214) - available in a box of 10 and 100pcs

The Marpac 214 is Marpac's standard Velcro-based adjustable tie.

The 214 offers great flexibility as it can be adjusted for nearly every neck up to 19". The soft padded foam laminate is sealed for comfort and durability, whilst the hook & loop fastener is cut at an angle for ease of threading through the eyelets of the tracheostomy tube.

The 214 is a popular general purpose tie for the ward-based patient.

Adult two-piece adjustable 'bariatric' tracheostomy ties

Adult (220D & 220SD) - available in a box of 10pcs

The Marpac 220D and 220SD are specialist tracheostomy collars for those patients that require a bariatric collar. Available as 3" wide (220D) or 2" wide (220SD) the Marpac bariatric tie will fit up to a 30" neck.

This wide design helps reduce pressure around the patient's neck and the possibility of 'wiring' that can cause pressure sores.

These devices are *not currently on NHS Supply Chain*, but can be ordered directly from CCMed Ltd.

Adult ventilator/circuit anti-disconnect. 'The HUB'

'The HUB' (900)

This unique device helps to keep the ventilator securely fastened to the tracheostomy tube - even when patients become more mobile - resulting in fewer accidental disconnects.

Made of a soft cloth/foam fabric, it is very gentle on the skin, is non-adhesive and yet grips the vent circuit securely. Whether you use the connection or wrapped method, Marpac's vent circuit anti-disconnect device is intuitive and easy to use.

The Velcro fastener has rounded edges that don't catch or sit and irritate the patient's skin.

The 'Hub' will work with most tracheostomy ties, but users find the wider and softer finish of the Marpac 204 works particularly well with this device.
