

Cyera Data Security Posture Management (DSPM)

Complete Data Clarity. Actionable Intelligence. Built for the AI Era.

Understand not just where sensitive data lives, but what kind of data it is, why it matters, and how it's used and accessed. Turn that understanding into confident action and safe AI enablement.

DSPM That Drives Actionable Data Intelligence

Effective DSPM requires more than AI-powered discovery and classification. Modern organizations need an autonomous, continuously enriched understanding of enterprise data that drives real decisions and real action.

Cyera delivers this by rapidly discovering and analyzing data across SaaS, IaaS, DBaaS, and on-prem environments using agentless deployment that scales without friction. More importantly, Cyera identifies sensitive, proprietary, and shadow data with unmatched precision and understands it in full business context, including purpose, ownership, access, usage, and risk as environments evolve.

By automatically adapting to each customer environment and operating autonomously, Cyera delivers Actionable Data Intelligence that security teams can rely on to prioritize risk, enforce policy, and proactively remediate exposure.

Proven Outcomes at Enterprise Scale

82 million

NetApp on-prem files scanned in under 40 days for one customer, compared to the months or years traditional data scanning projects often require

80%

reduction in breach likelihood for one customer by identifying and remediating high-risk exposures

\$3.7M+

in storage savings for one customer by eliminating redundant and obsolete data

Cyera Data Security Posture Management (DSPM)

Complete Data Clarity. Actionable Intelligence. Built for the AI Era.

Build a Trusted Data Security Foundation for AI Adoption

Discovery That Never Stalls

Autonomously discover sensitive data and AI across all environments and data types without manual scoping or predefined schemas. Maintain a continuously updated understanding of risk as data and environments evolve.

Classification That Understands Your Business

Continuously classify sensitive, proprietary, and business-specific data using Enriched Classification that adapts to how your organization creates and uses data, without manual tuning.

Turning Data Understanding Into Actionable Intelligence

Correlate content, sensitivity, identity, access, usage, exposure, and ownership to surface what matters now, what has changed, and where risk is emerging, enabling precise prioritization and business-impact analysis.

Proactive Remediation

Turn intelligence into action with automated remediation that reduces exposure proactively. Recommend or execute actions within guardrails or on demand, enabling fast response without sacrificing control.

Operational in Minutes, Built for Enterprise Scale

Deploy in minutes with agentless architecture and operate across hundreds of petabytes while maintaining continuous understanding as data, systems, and usage evolve.

Flexible Deployment, No Compromises

Deploy Cyera in the way that fits your security, privacy, and operational needs. Run fully within your cloud or on-prem environments so sensitive data remains in place, or use Cyera's managed SaaS deployment to maximize speed and efficiency without compromising security controls or accuracy.

A Trusted Foundation for Safe AI Adoption

Enable AI responsibly by understanding and governing training data, prompts, and AI access paths. With reliable classification and continuous understanding at scale, teams can innovate with AI while minimizing data leakage, misuse, and regulatory risk.
