

The AI Security Platform

Protect your data. Secure AI.

AI redefines where security begins.

70%+ of enterprise data is dark: years to discover, hard to classify, largely inaccurate. Meanwhile, business is moving forward with Copilots, and thousands of AI agents. Because data is the fuel for AI, without a strong data security program, AI risks remain unmanageable.

Cyera is the AI Security Platform that protects data and secures AI. By uncovering what data you have, where it resides, and which identities can access it, Cyera generates actionable intelligence you can act on to reduce risk, simplify compliance, and adopt AI securely.

Discover and understand your data and AI landscape

Agentless discovery across IaaS, DBaaS, SaaS, on-prem, email, and AI systems. Continuous scanning at petabyte scale finds sensitive data wherever it lives, including in places your AI can access.

Govern risk with enriched, AI-native classification

Classification that understands business context, not just patterns, enriching data with identity, access, and lineage to prioritize what matters. Automate policies and remediation based on actual risk.

Protect data at rest, in motion, and in use

Unified protection for users, AI agents, and applications. Block, alert, or allow usage based on data sensitivity and business context. AI-powered analysis of issues and alerts cuts through noise to surface real threats.

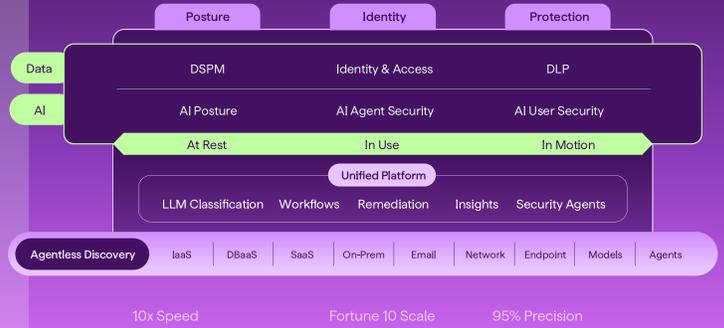

Enable safe AI use and create business value

See what data your AI tools can access before approving them. Monitor and stop sensitive data leakage through user prompts and agent actions. Adopt AI confidently with full visibility, not blind trust.

One platform to see and protect Data and AI

Discover and classify enterprise data with speed, precision, and at multi-petabyte scale to enable AI readiness, real-time risk reduction, and continuous compliance through a single vendor experience.

DISCOVER

Discover and understand

Inventory all data, identities, AI tools, and shadow AI

Classify and enrich data with context & AI precision

Assess data & AI security posture continuously

GOVERN

Manage risk

Enforce policies automatically based on data sensitivity

Track sensitive data flows across systems and AI tools

Remediate with native actions and automation

PROTECT

Prevent data loss

Control data access for users, AI agents, and applications

Respond contextually: block, mask, and alert

Detect and prevent data exfiltration in real time

ENABLE

Accelerate AI adoption

Deploy AI safely with full visibility into data access

Assess AI security risks for faster adoption

Accelerate AI initiatives with full data visibility

Trusted by security and data teams around the world

Our customers are advancing AI with confidence

80%

key risks eliminated in 3 months

98%

noise reduction in DLP

\$4M

compliance cost reduced

72hrs

to AI and data insights
