INSIDER ALERT

# Quick Coordination Fails Double Electronics Theft

Location: Indianapolis, Indiana

@overhaul

On August 8<sup>th</sup>, Overhaul executed a recovery of two full truckloads of high-value consumer electronics which were both picked up by the same carrier. The drivers had switched the tractor on the trailers hoping to thwart recovery efforts, and packages had been opened.

The shipments originated in Fort Worth, TX one day apart, and travelled to Indianapolis where the carriers became non-responsive. Upon notification of the theft, the LE Connect recovery team contacted the Indiana State Police to coordinate a recovery through multiple jurisdictions. When the first trailer was located, it was connected to a different tractor.

Coordinating with Indiana, and Kentucky state police, Overhaul was able to provide them photos of the trailers and live locations to the responding officers to quickly find the second trailer.

Although the trailers had been opened, the cargo was fully intact, and is valued at over \$500,000 USD.

## Overhaul's recommendation

Shippers of high-value or targeted goods should use multiple visibility solutions and brief drivers on route-specific risks. Drivers must watch for suspicious activity, such as being followed or surveilled, and team drivers should never leave loads unattended. When stopping, park in well-lit, visible areas if possible. Drivers should stay in contact with dispatch or monitoring centers in high-risk zones. Contextual intelligence, remote compliance monitoring, real-time visibility, and rapid escalation to law enforcement are essential for detecting and recovering stolen cargo.
