

## Secure Patient and Other Protected Health Info

Healthcare providers utilize data to deliver high-quality care, administer coverage, and improve patient outcomes. While data plays a critical role, it can also be challenging to secure. Data about medical diagnosis or billing records can be duplicated and stored in multiple locations, adding to the data sprawl that must be managed. Cyera helps healthcare providers understand the patient data they possess and the risks associated with that data, then take action to quickly limit security and compliance exposures.

### Healthcare Use Cases

Discover **PHI and other patient data** across IaaS, PaaS, and SaaS

Uncover the presence and risks of **PHI** when records **link to specific individuals**

Audit whether **encryption, logging, and access controls** are enforced

Comply with **HIPAA, HITECH Act, CCPA**, and U.S. state privacy laws

Prevent data misuse by ensuring only **authorized users** can access PHI

Understand the **sensitivity, classification, and context** of different types of data

### Benefits

- ✓ **Dynamic discovery** – continuously discover data across your multicloud landscape, keeping pace with cloud adoption and scaling to petabytes of data
- ✓ **Accurate, context-rich classification** – automatically develop highly accurate, deep context on what your unique and most sensitive data represents
- ✓ **Reduced data exposure** – quickly pinpoint and remediate security, privacy and compliance exposures with the correct controls, integrated with your tools and processes
