

Breach Readiness Service

Get actionable recommendations to improve your breach readiness and incident response capabilities

An effective incident response strategy can be the difference between a minor incident and a major disruption. Cyera's Breach Readiness service, led by an elite team of cybersecurity practitioners, identifies your top data risks and delivers actionable recommendations to reduce data threats. Enhance your organization's ability to quickly and effectively minimize the potential impact of a breach.

66% Of Security Leaders Struggle To Identify Security Exposures

Based On Forrester Report

Be ready for the next incident. We can help.

Breach readiness requires a well-defined incident response plan. This plan must include a thorough understanding of the business risks and impacts that could result from the compromise of critical data assets. Our service assesses your current capabilities, identifies gaps, and helps reduce response time.

With Cyera's Breach Readiness Services, You'll Know:

 <p>How your organization would respond</p>	 <p>What data is at risk</p>	 <p>What the potential materiality of a breach could be</p>	 <p>Which issues can be proactively fixed</p>	 <p>What the broader impact of a breach could be</p>

Cyera Breach Readiness Service: Our Approach

The Cyera Breach Readiness Service provides a practical and engaging approach to assessing your organization's breach readiness. Leveraging virtual CISO-led tabletop exercises, critical controls, OSINT and Dark Web intelligence assets, and Cyera's powerful data security platform, we deliver actionable insights into your specific operating environment. This approach not only enhances your overall security posture, but also increases awareness with key stakeholders and delivers tangible business value.

Assess Current Readiness

Evaluate incident response capabilities against industry best practices

Identify Data Assets

Scan datastores, data volume, growth rates, and data age

Classify Sensitive Data

Locate sensitive data, categorize data types, and evaluate context and file formats

Analyze Access

Identify top users with access, detect stale permissions, and review third-party access and sharing

Report Data Risks

Deliver prioritized recommendations and findings with specific steps to improve breach readiness

What makes Cyera unique?

Supports any data across any environment

- Structured, unstructured or semi-structured data
- SaaS, IaaS, PaaS, and on-premises
- Agentless deployment model
- Auto scanning and priority scanning

Most accurate classification in market

- 95% classification accuracy
- Auto-learning via proprietary AI-powered classification engine
- Rich context around data
- File/object level classification for unstructured data

Provides identity data access insights

- Determine identity (user, group, non-human) access to sensitive data
- Auto-assigned "Trust Level" for internal identities and 3rd parties
- View sensitive data accessible by Copilots used in workplace
