

SB SORTING BELT

Overview

The Armbruster SB is a food grade sorting belt used for manual sorting of whole or destemmed fruit. The belts are built on a stainless steel frame and contain a food grade continuous belt with no seams, joints, laces or fasteners. The pneumatic belt tensioning device provides instant slacking or tensioning of the belt. This gives you the ability to completely remove the belt from the frame in a matter of minutes and have complete access to both the frame and the belt for easy thorough cleaning and sanitizing.

Key Features

- Conveyor belt is one single piece with no seams or laces
