

## Company background

Founded in 2021 and headquartered in Los Gatos, CA, with additional offices in Tel Aviv, Lumana transforms video security with AI-powered solutions that elevate traditional video surveillance from reactive to proactive. By leveraging cutting-edge computer vision and machine learning, Lumana empowers organizations to unlock the full potential of their visual data, providing actionable insights that enhance security, boost operational efficiency, and enable immediate response to critical events. Backed by Wing, Norwest, and S Capital and guided by an experienced leadership team, Lumana has grown rapidly, expanding its team by over 50% in the last year to meet the growing demands of intelligent video security solutions.

## Lumana platform

The Lumana platform is built on three powerful, proprietary components, all designed and engineered in-house. At the center of the platform is the Lumana Core, an AI engine and video processor that seamlessly integrates with any IP camera to deliver enterprise-grade AI and modern video management capabilities. Lumana VMS+ provides an intuitive web-based application with essential enterprise video management features and seamless remote management. Rounding out the platform is Lumana's proprietary AI models, designed for the intensive demands of AI video workloads. These models enable security cameras to go beyond recording footage. Instead, they allow connected cameras to understand specific activities and behavior and continuously learn based on the environment. With Lumana, security cameras turn into video intelligence agents designed to automate monitoring, improve visibility, and accelerate response.

## Why Lumana?

World-class organizations across various industries trust Lumana to help transform video security from a passive monitoring tool into a proactive, insight-driven solution. Lumana enhances loss prevention efforts for retail clients by automatically identifying suspicious behaviors and known thieves in real time, reducing shrinkage, and improving store safety. For education, Lumana proactively monitors for guns and trespassers, allowing staff to respond instantly when potential threats arise. Manufacturing facilities utilize Lumana's technology to enforce safety protocols, alert supervisors to hazardous behaviors or missing PPE, and significantly reduce workplace accidents.

At Lumana, we believe in delivering the most intelligent video security experience possible by deploying video intelligence agents that automate manual monitoring and help you see events when they matter most. Your success is our success, and we hope for the opportunity to work alongside you to deliver an AI-driven solution that exceeds your expectations and provides you with a smarter way of managing your security, safety, and operations.
