## Key benefits

**Pair access events + video**

Lumana automatically indexes video of access control events, such as entry, exit, and door status.

**Control doors within VMS+**

Visually authenticate visitors and quickly lock or unlock doors directly within the Lumana platform.

**Receive alerts for tailgating**

Create AI-powered alerts to monitor access and issue real-time notifications when tailgating events occur.

## Set up instructions

1  Kisi

Install

Install an integration via your organization's settings

2 API Key

Insert API Key Install

Insert the API key provided by your access control partner

3 Assign door to cameras

Select "Assign doors to cameras" in your integration management portal

4 Location

Choose location ▾

Lumana Headquarters

Select a location

5 Door

Choose door ▾

Front Entrance

Select a door

6 Cameras

Choose cameras ▾

 Door ✓

Select a camera

# How it works

## Integrate Kisi with Lumana in minutes

Leveraging Lumana's open architecture, organizations can acquire an API key from their Kisi access control system to connect to Lumana within minutes.

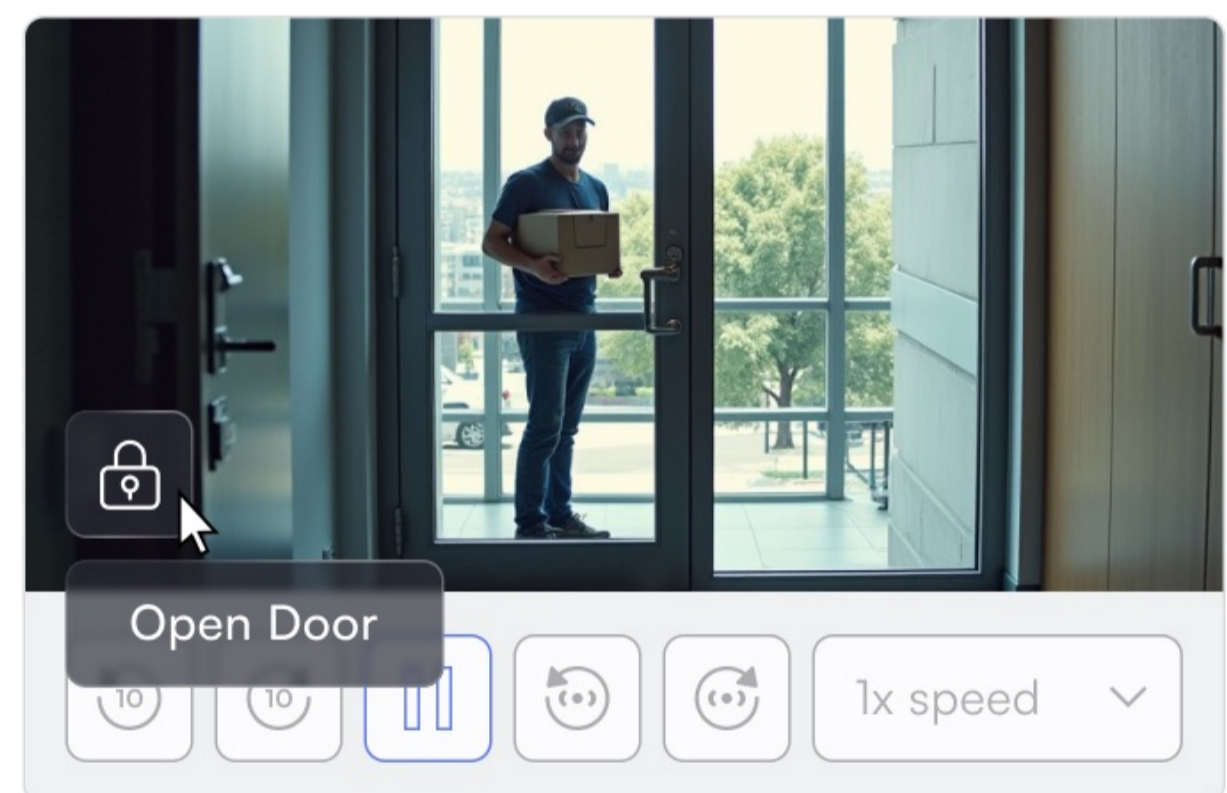

## Pair AI cameras with access control

Once cameras are connected to doors, Lumana will automatically index video for access events, allowing for visual authentication, historical search, and more.

## Experience AI-driven physical security

Control doors directly with Lumana VMS+ and receive alerts when tailgating occurs. Get first access to AI access control features when they become available.
