the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors that have contributed to the increase in the number of people in the world who are under 15 years of age. One of the main factors is the increase in the number of people who are surviving into old age. This is due to a number of factors, including improvements in medical care, better nutrition, and a decline in the number of people who are dying from infectious diseases.

Another factor is the increase in the number of people who are having children. This is due to a number of factors, including a decline in the number of people who are having children at an early age, and a decline in the number of people who are having children at a late age. This is due to a number of factors, including a decline in the number of people who are having children at an early age, and a decline in the number of people who are having children at a late age.

The increase in the number of people in the world who are under 15 years of age is a major challenge for the world. It is a challenge that requires a number of different approaches. One approach is to improve the quality of education for children. Another approach is to improve the quality of health care for children. A third approach is to improve the quality of nutrition for children.
