Wurstsalat m. Brot	9.50
Brotzeitbrett / Käsebrett je	13.10
Panna Cotta im Glas	4.80

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion (United Nations 1999). The number of children in the world is projected to increase to 2.5 billion by the year 2025 (United Nations 1999). The United Nations (1999) also predicts that the number of children in the world will increase from 1.2 billion in 1990 to 1.8 billion in 2010.

There are a number of factors that are likely to contribute to the increase in the number of children in the world. One of the most important factors is the increase in the number of children who are born to women who are under 15 years of age. This is a result of a number of factors, including the increase in the number of women who are working outside the home, the increase in the number of women who are using contraception, and the increase in the number of women who are having children at a younger age.

Another factor that is likely to contribute to the increase in the number of children in the world is the increase in the number of children who are born to women who are over 35 years of age. This is a result of a number of factors, including the increase in the number of women who are working outside the home, the increase in the number of women who are using contraception, and the increase in the number of women who are having children at a younger age.
