Kerbs

Hydraulically pressed & vacuum – de – watered

Basant Betons manufactures a premium range of kerbs that are hydraulically pressed and vacuum – de – watered from a plant imported from the UK. Because of the vacuum – de – watering all these products attain outstanding strength and also have a pimple finish surface, thereby giving the products an aesthetical appearance. Where required these products can be subject to further processing such as shot blasting. These products can be produced in various colours and shades.

Flags

Basant Betons manufactures a premium range of Flags that are hydraulically pressed and vacuum – de – watered from a plant imported from the UK. Because of the vacuum – de – watering all these products attain outstanding strength and also have a pimple finish surface, thereby giving the products an aesthetical appearance. Where required these products can be subject to further processing such as shot blasting. These products can be produced in various colours and shades.

Flags bring a new vibrancy and variety to the urban environment when used in pavements, walkways, building entrances and forecourts. The flags come in a wide range of textures, finishes and colours that add an out-of-this-world aesthetic value to the urban landscape, and they can be used in combination with other materials to create a wonderful variety of designs and colour combinations.

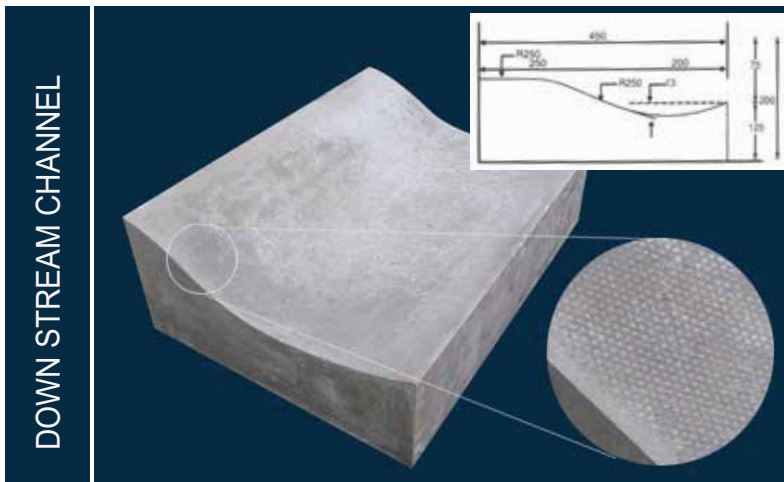

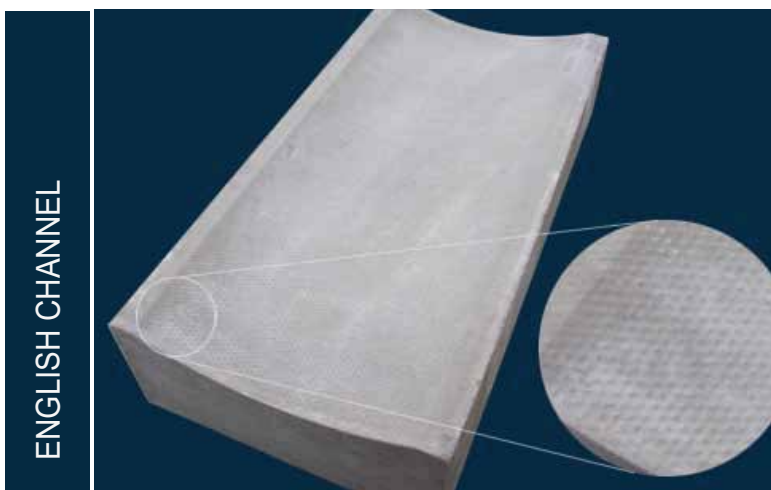

These flags are meant for light vehicular traffic which means all four wheelers like cars including all types of SUVs can comfortably ply. We do not recommend use of these flags in such driveways, where loaded trucks and other heavy vehicles need to move.
