

Built On Experience.
Made for Project Management.

pmantra.tech

Nice to meet you.

THE FOUNDER'S MISSION

As a Project Manager with over 10 years of experience on massive industrial and cruise ship projects, I've lived the frustration of site-based management. I've spent countless nights fixing unsaved files, chasing down missing reports, and dealing with the 48-hour lag between reality and data. I built PMantra because I was tired of the administrative chaos. This is a system designed to handle the pressure of the field, so you can stop being a data-entry clerk and start being a Project Manager again.

What is PMantra?

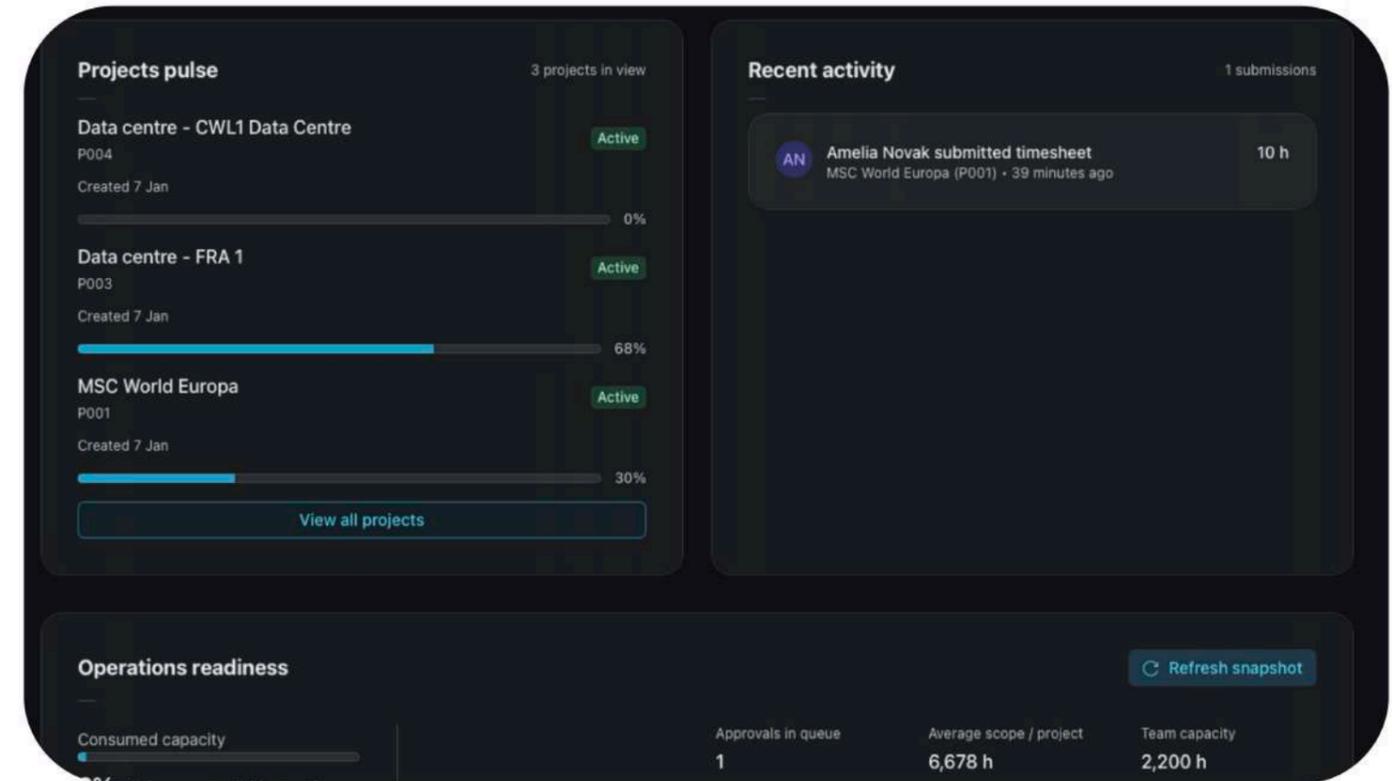

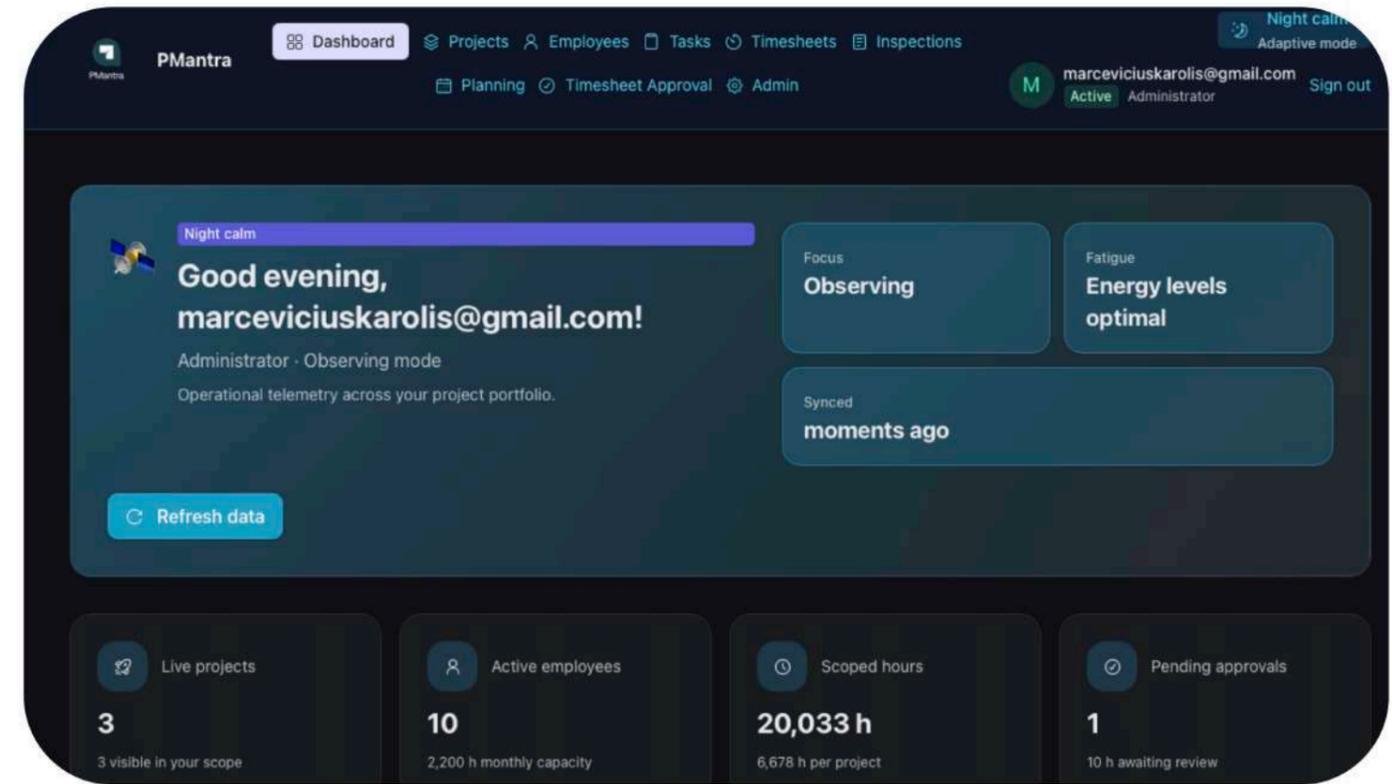

Simple.

Industrial Project Management Without the Spreadsheet Chaos

A PRACTICAL SYSTEM BUILT BY PROJECT MANAGERS, FOR PROJECT MANAGERS.

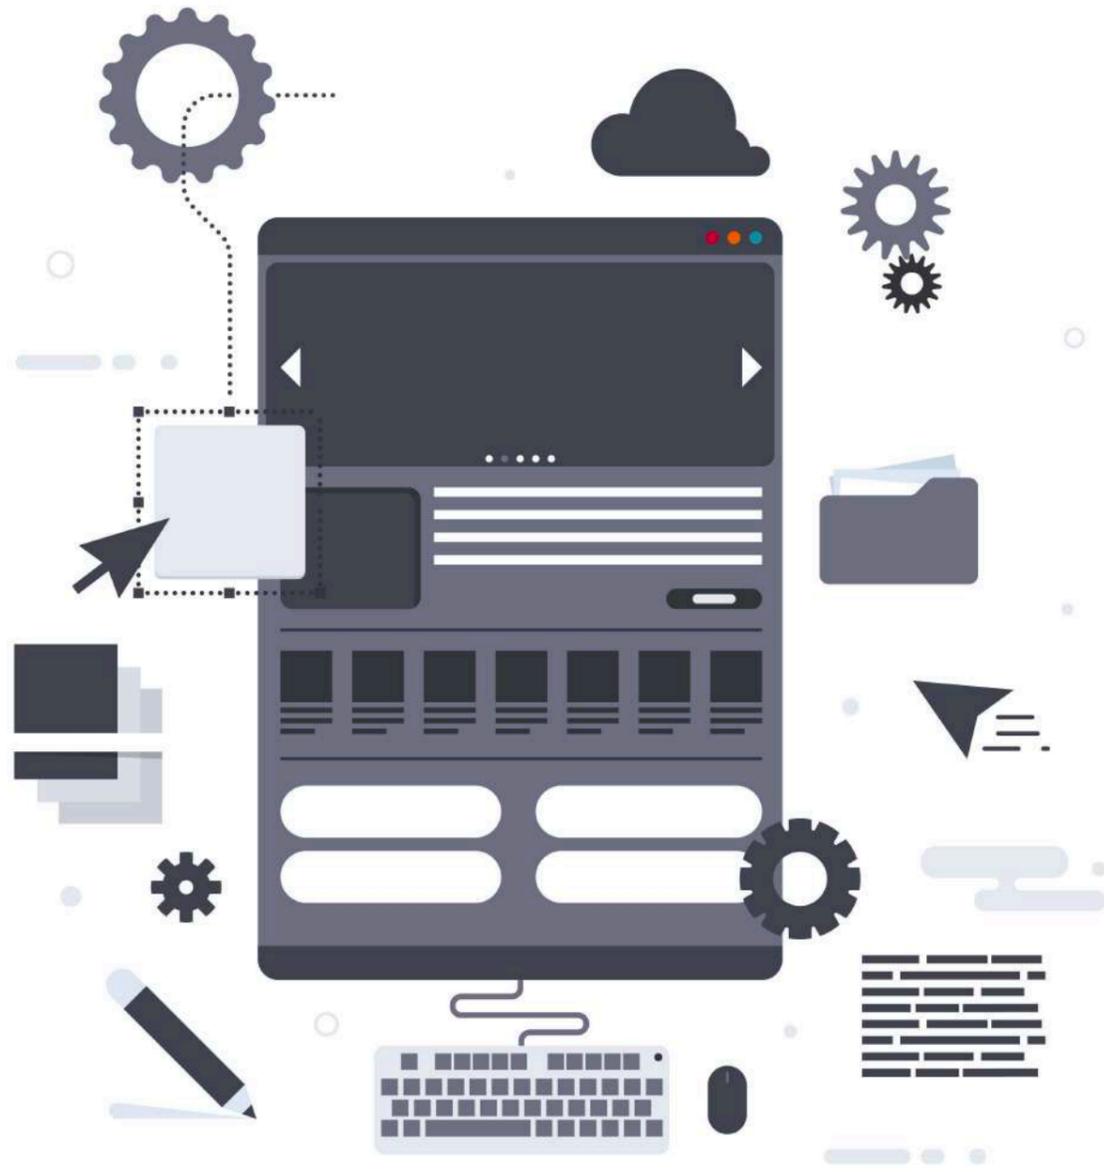

What is PMantra for?

PMantra is built for Project Managers working in real, field-driven environments - where decisions must be made fast and data must be accurate. It is especially designed for subcontractor Project Managers - the critical middle layer between the workforce on site and the client. Subcontractors must respond to two sides at once: managing teams on the ground while providing timely, reliable data to the main contractor or client. PMantra gives Project Managers real-time visibility into progress, resources and performance, helping them stay in control, avoid delays and communicate with confidence - both upward and downward. Because when you are responsible for delivery, late or incomplete data is not an option.

Live view of all your projects

Chaos? Not with PMantra.

Executive Summary

The End of Spreadsheet Fatigue

Replace error-prone Excel files with a resilient, unified system that never "forgets" to save.

Real-Time Execution

Close the gap between the field and the office with instant data sync.

Psychological Safety

Build a "Culture of Truth", where data protects the team's progress rather than being used for blame.

Engineered for Scale

1.5% efficiency gain in a 10-person team covers the cost-making it a zero-risk upgrade for your PMO.

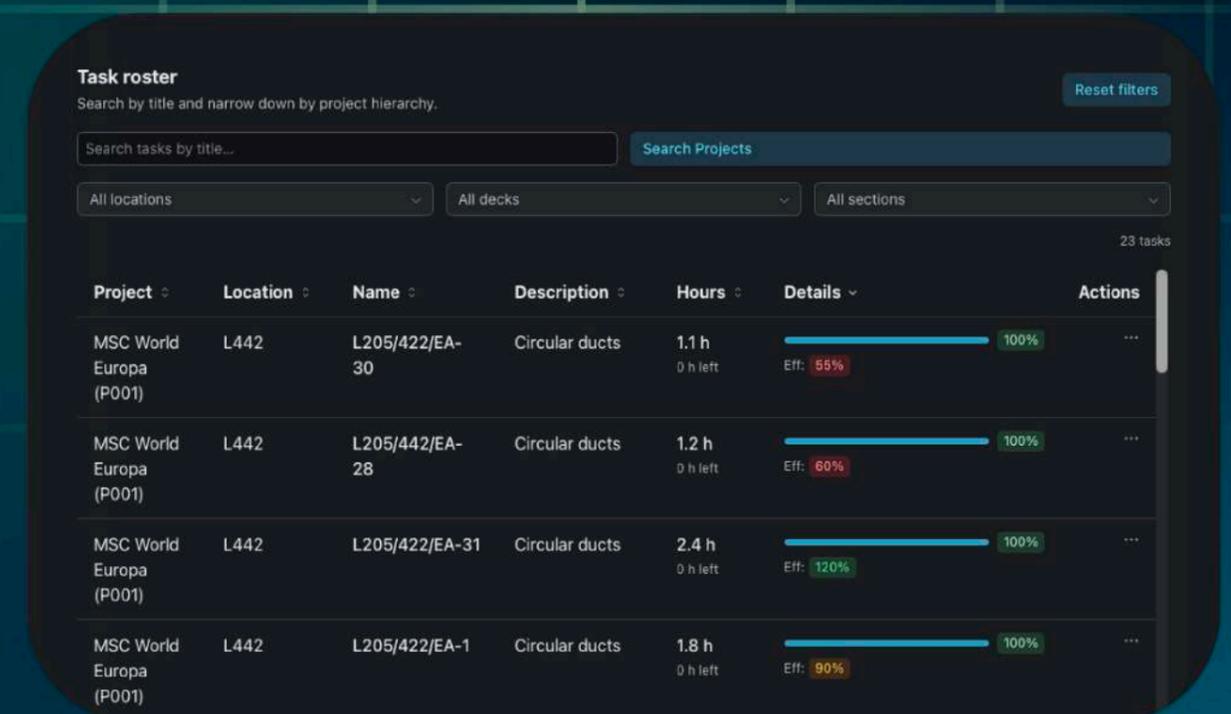

The Problem: The Reporting Lag

Decision-Making on Old Data: In large projects, if your data is 24 hours old, it's already obsolete.

Data Fragility: Broken formulas and "version drift" in spreadsheets create a foundation of sand for your multi-million dollar budget.

Administrative Burnout: High-level PMs are losing hours every day to manual updates and copy-pasting status reports.

PMantra: Quick look at the tasks efficiency

The screenshot shows the 'Task roster' interface in PMantra. It includes a search bar for tasks by title, a 'Search Projects' button, and filters for 'All locations', 'All decks', and 'All sections'. The main table displays task details for four entries, each with a progress bar and efficiency percentage.

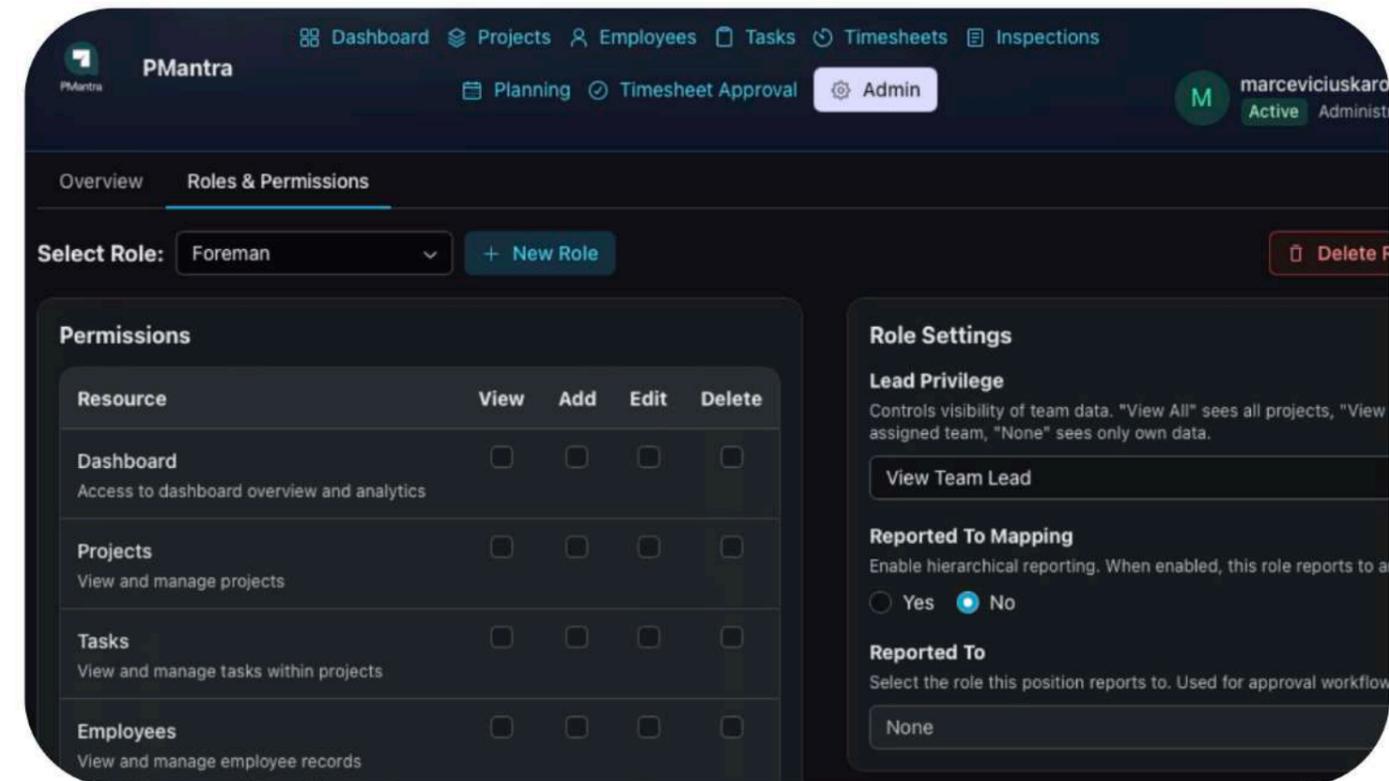

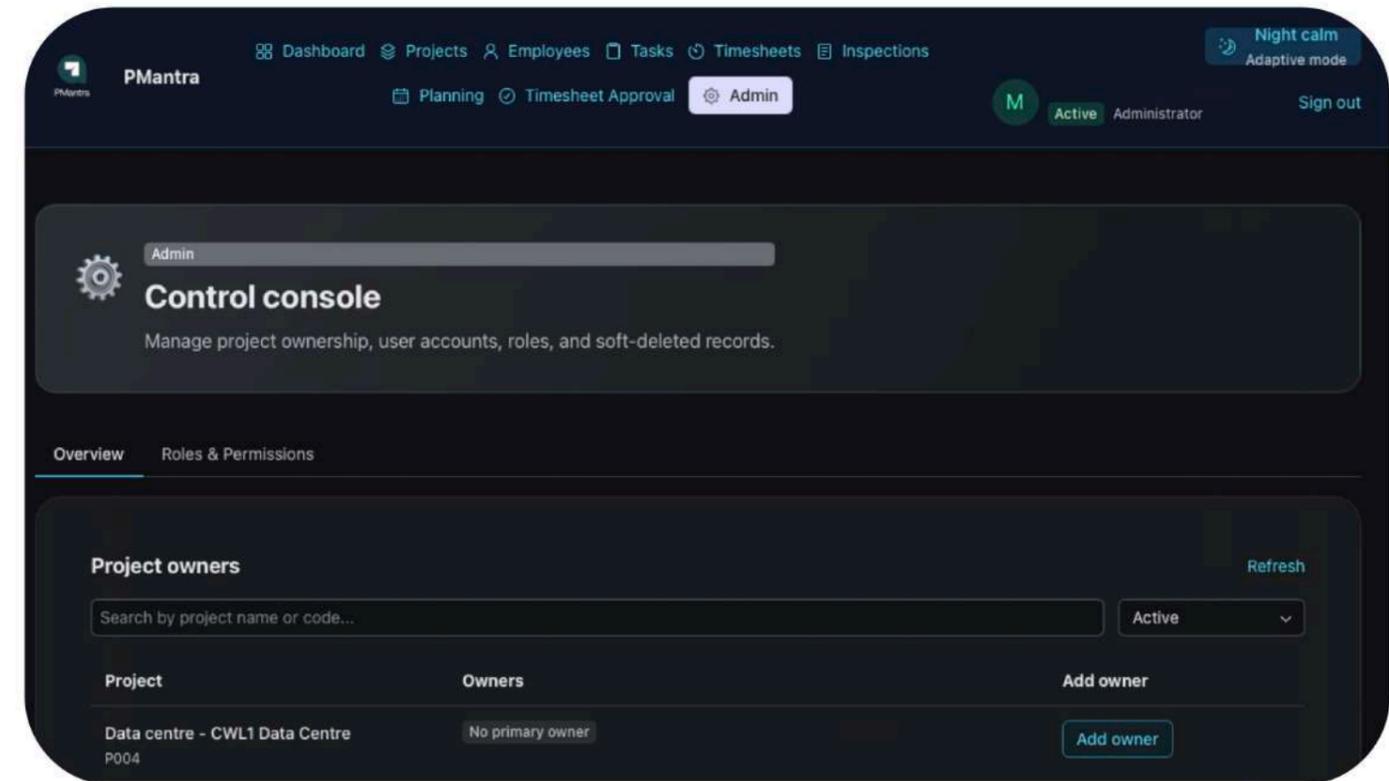

Project	Location	Name	Description	Hours	Details	Actions
MSC World Europa (P001)	L442	L205/422/EA-30	Circular ducts	1.1 h 0 h left	Eff: 55% 100%	...
MSC World Europa (P001)	L442	L205/442/EA-28	Circular ducts	1.2 h 0 h left	Eff: 60% 100%	...
MSC World Europa (P001)	L442	L205/422/EA-31	Circular ducts	2.4 h 0 h left	Eff: 120% 100%	...
MSC World Europa (P001)	L442	L205/422/EA-1	Circular ducts	1.8 h 0 h left	Eff: 90% 100%	...

Solution? We got this.

Real-Time Project Pulse

Stop waiting for weekly updates. Our modern tech stack ensures that every entry from the site is reflected in your dashboard the second it happens.

- ✓ **Live Dashboards:** View actuals vs. budget in real-time.
- ✓ **Instant Sync:** No "Save" button required - your data is secure and up-to-date across all devices instantly.

Manage project owners – quickly create user, manage roles create custom ones

Solution? We got this.

Psychological Safety & The "Culture of Truth"

The biggest barrier to project success is often the fear of reporting bad news. PMantra changes the psychology of reporting:

- ✓ **Immutable Audit Trails:** Approved records protect PMs and workers from disputes. The data is the "single source of truth."
- ✓ **Support, Not Surveillance:** Shared visibility allows leads to identify "at-risk" areas and provide resources before a failure occurs.
- ✓ **Accountability without Friction:** Clearly defined roles ensure everyone knows what is expected, reducing the stress of site-wide uncertainty

Built for the Field

We know that project environments are messy and high-pressure.

- ✓ **Location-Based Tracking:** Organize work by Area → Zone → Task
- ✓ **Offline-First Reliability:** Capture data even in "dead zones" and sync automatically once you're back online.
- ✓ **Accountability without Friction:** Clearly defined roles ensure everyone knows what is expected, reducing the stress of site-wide uncertainty

Approved entries

Date	Project	Location	Hours	Note	Approved at
07/01/2026	MSC World Europa (P001)	L442 Deck 5 Section 4424	10.00	—	07/01/2026, 19:01:29
06/01/2026	MSC World Europa (P001)	L442 Deck 5 Section 4423	8.00 10.00	—	07/01/2026, 19:09:49

Key Value Propositions

Tired of Excel? This app is going to save you.

Move from scattered spreadsheets to a living system that handles the heavy lifting for you.

Eliminate Reporting Lag

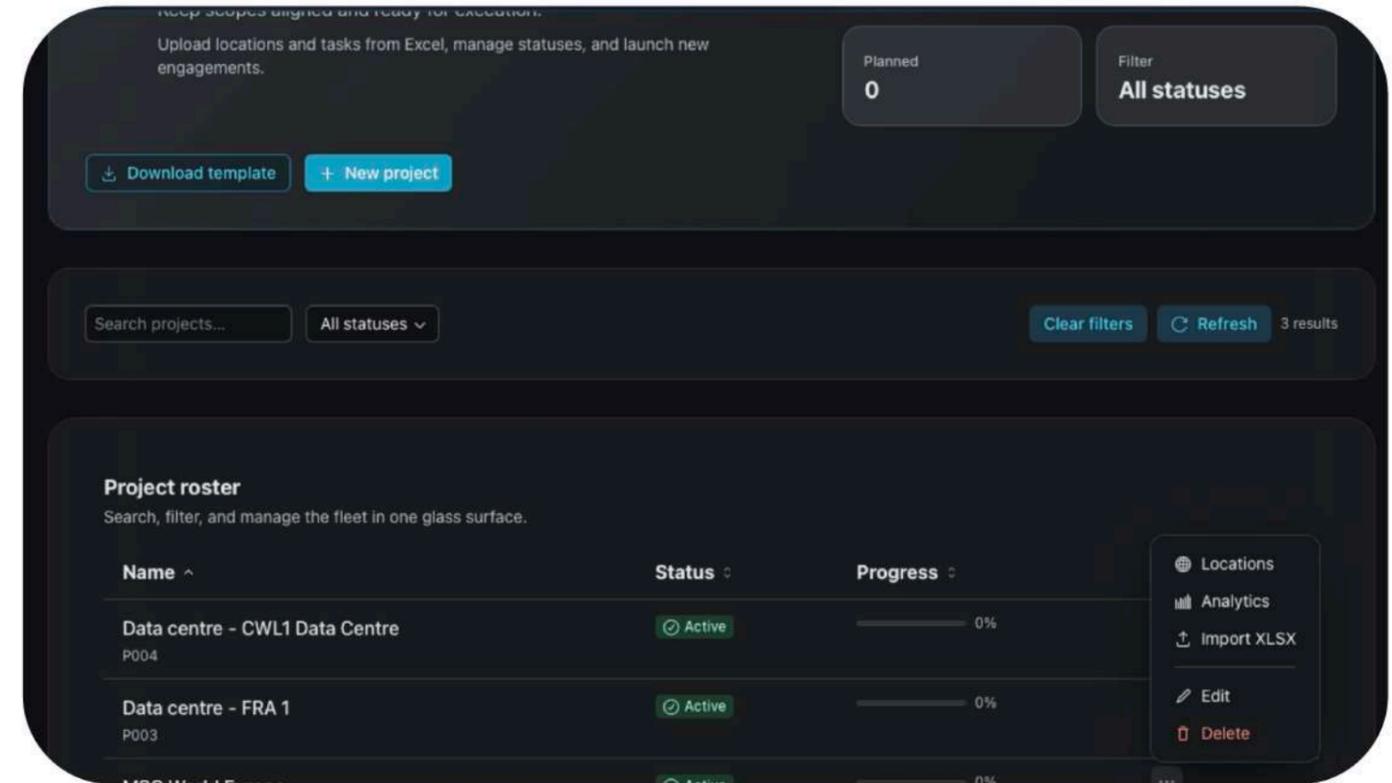

Move from "What happened last week?" to "What is happening right now?"

PMO-Ready Analytics.

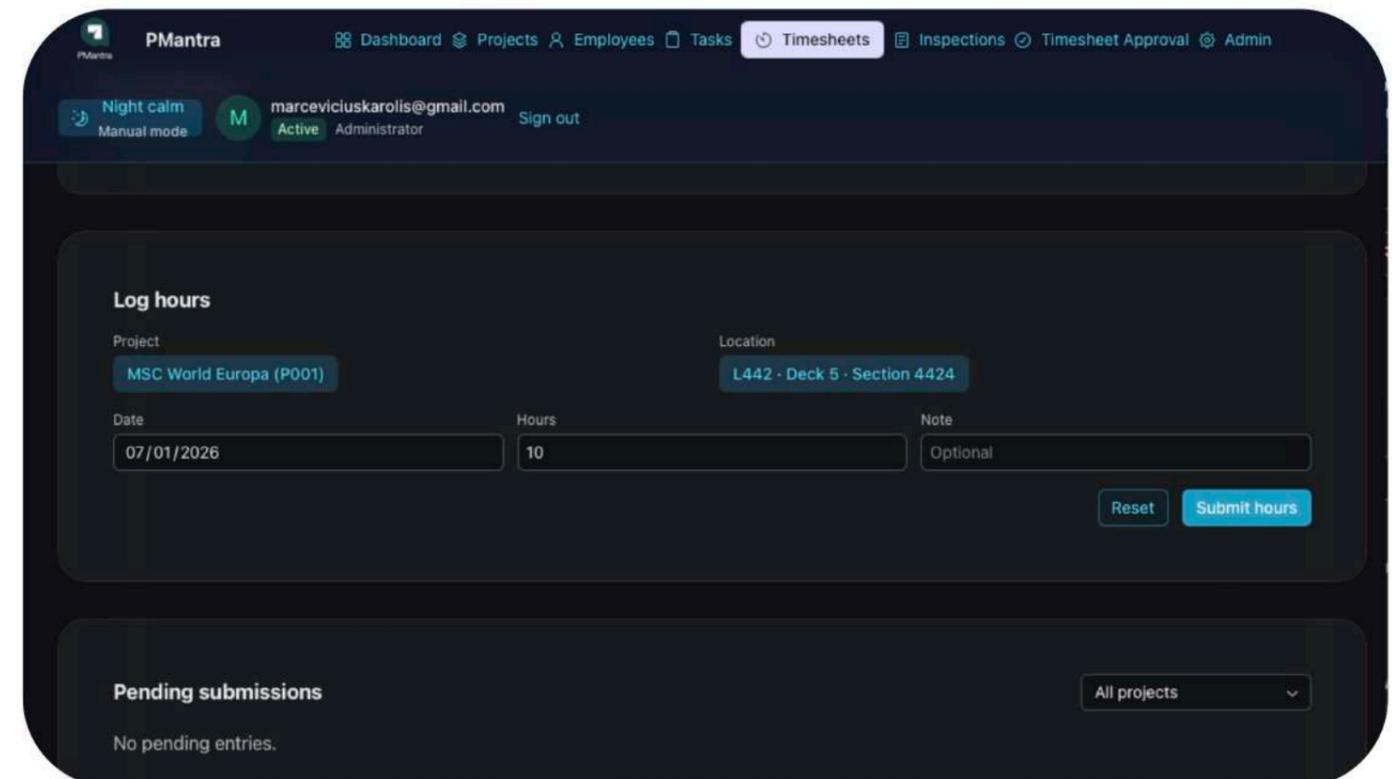

Self-serve insights that eliminate the need for project analysts to "clean" data before it's presentable.

Engineered ROI

10 people × 1 year × 1.5% efficiency gain = The system pays for itself.

Easy to import

For worker it is easy to fill the hours by location they worked

Core Workflow

Capture:

Teams log hours and progress directly against specific zones.

Verify:

Inspections attach photo evidence and quality results directly to the task.

Approve:

PMs review and lock data, creating a permanent, audit-ready history.

Analyze:

Real-time rollups provide health signals (Green/Amber/Red) across your entire portfolio.

Security & Reliability

Data Integrity:

Built on a professional-grade backend with strict role-based access.

Audit-Friendly:

Every approval is timestamped and immutable-perfect for compliance and cost-tracking.

Reliability:

Lightning-fast performance designed for the modern web and mobile experience.

Call to Action

Stop the Spreadsheet Leak:

Import your current project (CSV/Excel) in minutes.

Book a Demo:

Let's talk about your specific reporting pain points and how we can solve them.

Measure the Gain

Run a 30-day pilot on one project and see the 1.5% efficiency gain in action.

Projects → Locations → Tasks → Timesheets/Inspections

FAQs: The Transition to PMantra

"I've spent years building my Excel templates. Do I have to start from scratch?"

No. We built Pmantra with a "Bring Your Own Data" philosophy. You can import your existing task lists, location breakdowns, and team rosters via CSV or Excel in minutes. Think of us as the professional upgrade to your spreadsheet, not a replacement for your logic.

"How does this handle 'Real-Time' differently than a shared Excel on OneDrive/Teams?"

Shared spreadsheets often suffer from "Sync Conflicts" or files getting locked when too many people are in them. Pmantra uses a live database. This means while a foreman is logging hours on-site, you see the project health dashboard update instantly in the office-no refreshing, no "Read-Only" errors, and no unsaved changes.

"My site leads aren't tech-savvy. Will they actually use this?"

This is where Psychological Safety comes in. We designed the interface to be "Two-Tap" simple. Instead of forcing them to navigate rows and columns on a small screen, they follow a natural flow: Where are you? What are you doing? How long did it take? When the tool makes their life easier (by not having to walk back to the office to submit paper/Excel logs), adoption happens naturally.

"What happens if someone accidentally deletes a project or a month of hours?"

In Excel, a "Delete" can be a catastrophe. In Pmantra, we use Soft-Delete Safety Nets and Role-Based Access. Only authorized Admins can remove data, and even then, it is archived in the backend, not erased. Your audit trail remains intact.

"Can I still get my data out if I need to do custom reporting?"

Always. Your data is yours. You can export any view back to Excel/CSV/API at any time. We also provide a structured data model, that plugs directly into BI tools like PowerBI or Tableau if you want to go deeper.

"How does this improve the 'blame game' during project delays?"

When a project lags, the first casualty is usually the truth. Because Pmantra captures Real-Time progress and photo evidence, you have an immutable record of what happened and when. This shifts the conversation from "Who messed up?" to "Here is the data-how do we fix the bottleneck?"

"Is it expensive to switch?"

Actually, the "Excel Chaos" is what's expensive. If your team of 10 achieves just a 1.5% efficiency gain, the system has already paid for itself. Most projects see gains far higher than that just by eliminating the 48-hour reporting lag.

Visual Project Planning & PDF Export

Moving beyond simple lists, we are introducing an **Intuitive Planning Module**.

Dynamic Scheduling: Use "Slide & Drop" functionality to adjust timelines and dependencies on the fly.

Instant Reporting: Generate "Client-Ready" PDF progress reports with a single click, formatted for professional distribution.

Next-Gen Analytics Dashboard

We are upgrading our reporting suite to include **Cutting-Edge Predictive Analytics**.

Trend Forecasting: Our engine will analyze current burn rates to predict completion dates before you hit a bottleneck.

Visual Heatmaps: Identify "Red Zones" in your project locations where progress is stalling compared to the labor hours invested.

QR Code Task Integration (Site Efficiency)

To further reduce site-lead friction, we are introducing a **QR Code Generator**.

Quick-Close Tasks: Print and stick QR codes at physical work locations (e.g., on a specific machine, door, or block).

Instant Access: A worker scans the code with the PMantra app to instantly open the correct task, log hours, or upload an inspection photo—no searching required.
