

How a Major Texas Utility has Taken a Proactive Approach to Stormwater Management Utilizing Third Party Inspections

AT A GLANCE

BUSINESS

Major Texas Utility

THEIR CHALLENGE

Upholding stormwater management and compliance requirements enforced by the TCEQ and local stormwater ordinances for a large quantity of active construction projects.

OUR SOLUTION

Deploying our experienced SWPPP inspection experts, innovative technology, and proven process in environmental compliance.

OVERVIEW

Per the Texas Commission on Environmental Quality (TCEQ), stormwater permits are required for the discharge of stormwater associated with construction activities that disturb one (1) or more acres of soil. Our client has many active construction projects at any given time that require diligent permitting and inspection efforts.

This client has elected to utilize Principle Services Environmental as a third-party stormwater compliance inspector. We serve as a neutral party, acting in the client's best interests, to monitor and report on stormwater compliance using innovative and efficient reporting tools. Conducting these third-party inspections from mobilization through final stabilization is a proactive way to mitigate risk associated with compliance violations.

PROGRAM DETAILS & RESULTS

17+ Years of SWPPP Inspection Services

1500+ Individual Site Inspections Completed Annually

Sole provider of SWPPP Inspection across the client's portfolio

Single Site (Substation) and Linear Project (Transmission & Distribution Line) Inspections Completed

No TCEQ violations or penalties imposed
