## **Moddy Launches Public Beta of Its Mobile App, Bringing AI-Powered Prediction Models to Sports Bettors**

*Bettors get direct access to 800+ creator-built prediction models with verified track records — every pick, every result, documented*

---

ATLANTA, April 27, 2026 — Moddy AI, Inc., the AI-powered sports intelligence platform, today announced the public beta of its mobile app for sports bettors, now available on both iOS and Android. The launch completes the two-sided marketplace Moddy has been building since launch — connecting a growing community of model builders directly with bettors looking for verified, data-backed predictions.

For the past six months, Moddy's creator platform has given model builders the tools to build, test, and publicly track sports prediction models. Today's launch gives those creators something they've never had in one place: an audience of bettors actively looking for verified models to follow. And it gives bettors something the picks industry has never offered: full performance transparency on every model, every pick, every result.

### **A two-sided platform, now connected**

Moddy's creator platform has grown into a deep library of performance-verified models — over 800 active models, 2 million predictions tracked, and 126 million data points powering the system. Until now, that library lived on the creator side of the platform.

The mobile app changes that. Bettors can now browse models, follow the ones they trust, and see picks surfaced directly from top performers — without needing any modeling expertise of their own.

*"We've spent the last year building the engine. Today, bettors finally get to use it — and our creators finally get the audience their work deserves." ~ Todd Rogers, Co-Founder, Moddy*

### **What the app delivers**

The Moddy beta app gives bettors a fundamentally different way to approach sports betting:

- Access to 800+ prediction models with verified win rates, ROI, and full track records
- Picks surfaced in real time from top performers and the models users follow – refreshed as game, team, and market data changes
- A live leaderboard ranking models by recent performance
- The ability to follow specific models and save picks for upcoming games
- Full performance transparency – every pick, every result, documented

Unlike traditional picks services, Moddy does not sell locks or hide losses. Every model's performance is tracked and visible publicly, giving bettors the data to make their own informed decisions.

### **Built for this moment**

With NBA Playoffs underway and the MLB season in full swing, bettors now have access to verified prediction models across two major sports simultaneously – at one of the highest-volume periods in the sports betting calendar.

*"Anyone can look smart in October. Playoff basketball is where models earn their credibility, and where bettors most need something more reliable than a hot take." ~ Conrad Wredberg, Co-Founder, Moddy*

### **Availability**

The Moddy app is available now in public beta on iOS and Android. The app is free to download and open to all users during the beta period. Download the app at <http://go.moddy.ai/A7XM7a>

### **About Moddy**

Moddy is an Atlanta-based prediction platform bringing transparency and accountability to sports betting. Its creator platform gives model builders structured tools and AI-assisted workflows to build and validate data-driven prediction models without requiring data science expertise. Its mobile app, now in public beta, gives bettors direct access to those models and their verified track records. Learn more at <http://go.moddy.ai/A7XM7a>
