Moddy Launches Nationwide, Giving Bettors the Combined Intelligence of Hundreds of AI Prediction Models

Moddy's new mobile app puts an army of independently built, performance-tracked AI models in every bettor's pocket — and surfaces the strongest signals across all of them automatically.

ATLANTA, June 2, 2026 — Moddy AI, Inc., the AI-powered sports intelligence platform built for model creators and data-driven bettors, today announced the **official launch of its mobile app** on the Apple App Store and Google Play Store. For the first time, any bettor can carry the combined intelligence of hundreds of AI prediction models in their pocket — each one independently built, and each one judged on real, publicly tracked results.

It's a structure the betting market hasn't seen before: an open ecosystem of AI models, built by a community of independent creators, ranked by verified performance, with the strongest picks surfaced directly to bettors. Most services sell you a single voice and ask you to trust it. Moddy gives you a whole population of models competing on results — and does the work of finding the best ones for you.

"Every serious bettor has wished for a room full of analysts working on their side. That's what we've put in your pocket — hundreds of AI models, each one built and battle-tested by an independent creator, all working to inform your next bet." — Todd Rogers, Co-Founder, Moddy

The strongest signals, surfaced automatically

The centerpiece of the app is Top Picks, which puts that entire population of models to work for the bettor. Rather than asking users to guess which model to trust, Moddy continuously evaluates picks across every public model on the platform and surfaces the day's strongest signals, ranked by performance. It's the upside of hundreds of AI models without the homework — the army does the searching, and the bettor gets the shortlist.

Performance is the only currency

What makes that shortlist trustworthy is the same thing that makes Moddy different: nothing hides. Every model on the platform carries a complete, public track record – wins, losses, ROI, and edge. Cold streaks aren't buried. Performance, and only performance, determines what rises to the top.

"We built Moddy because we were tired of the same story in sports betting – someone selling confidence with no receipts. Every model on our platform lives or dies by its actual results. Bettors can see exactly what a model has done, how it's doing lately, and whether its edge is real or just a hot streak." – Todd Rogers, Co-Founder, Moddy

What bettors get

The Moddy app brings together a full toolkit for smarter, better-informed betting:

- **Top Picks** – the day's strongest signals, surfaced and ranked from across the entire population of public models
- **Model leaderboard** – browse and follow models ranked by rolling 30-day ROI
- **Pick details** – every pick shows the model behind it, the line it caught, odds history, and strength rating
- **Bet tracker** – save picks, track real-dollar results, and see breakdowns by sport, market, and odds range
- **Performance analytics** – automatically surfaces where you're winning and losing

The app launches with coverage across all three major American sports leagues – MLB, NBA, and NFL – powered by 126M+ data points and 800+ AI models built by independent creators on the Moddy platform.

Built by creators, proven for bettors

Moddy's creator platform lets model builders turn a sports thesis into a fully tested, AI-powered prediction model – no coding or data science required. Those models compete in the open, and the ones that perform earn their way in front of bettors. That two-sided design – creators build, performance decides, bettors benefit – is what makes Moddy structurally different from every other picks service on the market.

Availability and pricing

The Moddy app is available now on the Apple App Store and Google Play Store. A 7-day free trial requires no credit card, and the subscription is \$19/month after the trial. Learn more at moddy.ai/app.

About Moddy

Moddy is an Atlanta-based prediction platform bringing transparency and accountability to sports betting. Its creator platform gives model builders structured tools and AI-assisted workflows to build and validate data-driven prediction models without requiring data science expertise. Its mobile app, now available on iOS and Android, gives bettors direct access to those models and their verified track records. Learn more at <https://moddy.ai>
