

● CAPABILITIES OVERVIEW

Custom Code. No Templates. No Nonsense.

Stacklumen is a software company in Lexington, Kentucky and Memphis, Tennessee, building Webflow sites, custom applications, and tools for the modern business. Forty-plus sites shipped since 2022 — every one designed and coded by hand, built to be fast, and built so your team can actually run it. No templates, no bloat, no agency runaround.

● SERVICES

Six ways we help.

01

Custom Websites

Designed and coded from scratch in Webflow, never a template. Fast, responsive, and easy to update without a developer on call.

02

E-Commerce

Shopify storefronts built to sell: clean product pages, a checkout that converts, and a back end your team can run.

03

Custom Software

Production-grade apps, internal tools, and platforms on a modern TypeScript stack — full code ownership at handover.

04

Branding & Visual Identity

Logo, type, color, and the system that holds it together, so your brand looks consistent everywhere.

05

Social Media Management

Content planning, post design, publishing, and a monthly report. A consistent feed without the weekly scramble.

06

Ongoing Support

Updates, fixes, and improvements after launch, plus the Hublumen client portal to track work and approvals.

● WHY STACKLUMEN

■ **No templates**

Every line is custom-coded to your brand, not a stock theme.

■ **One studio, full stack**

Design through deploy, handled in one place.

■ **Built to maintain**

You can update it yourself. No lock-in, no gatekeeping.

■ **Direct access**

You talk to the people actually doing the work.

Let's build something.
