Work Experience

Farewell, Bend OR

Intern / Project Support Specialist

2024-2026

I started as an intern at Farewell Media and grew into a Project Support Specialist, supporting the design and development of client websites using Webflow. I contributed to site builds, SEO research, and overall project polish across multiple stages of production. The role required close attention to detail, adaptability, and strong collaboration with designers and project managers while balancing part-time work alongside full-time college coursework.

Alternate Allele Consulting, Orinda CA / Hood River OR

Intern

2021-2022 & 2026

At Alternate Allele, I developed automated testing for a health-focused website using Python and JavaScript, and built R and Shiny applications to visualize genetic testing data. More recently, I redesigned and rebuilt the company website, working closely with the client to refine structure, visuals, and usability. This role combined technical problem-solving with direct client collaboration and attention to detail.

Macaw Services LLC, Hood River OR

Designer and developer

2024

For Macaw Services LLC, I worked closely with a biotech consultant to define brand direction and communication goals through interviews and a structured questionnaire. I translated those insights into a cohesive design system, including a logo and visual guidelines, and designed a single-page website intended to present the consultant's work and make it easy for potential clients to connect.
