

WOODVILLE PLACE PLAN

A participatory place-led vision and action framework to guide the future evolution of the Woodville Neighbourhood Activity Centre.

WHAT WE DID

- Led a place-based engagement and co-design process to inform the development of a clear vision and spatial priorities for the Woodville Neighbourhood Activity Centre.
- Designed and facilitated a deliberative community panel (the Woodville Neighbourhood Team) to provide in-depth local insight and test emerging ideas.
- Delivered a structured program of three urban design-focused workshops, moving from values and lived experience, through key concepts and aspirations, to actions, priorities and place-making opportunities.
- Used on-site activities, mapping and visual tools to ground conversations in the physical environment and explore movement, public realm, safety and activation opportunities.
- Synthesised community input into clear place principles, design directions and priority actions to guide future investment and decision-making.
- Prepared accessible, well-designed engagement outputs to clearly communicate outcomes to Council, stakeholders and the broader community.
