

CMMC: Assessment-Ready in Weeks

StreamEnclave is a fully secured CUI enclave operating environment that enables organizations to become CMMC Level 2 ready in weeks.

By providing a focused, purpose-built compliance environment, StreamEnclave streamlines the path to certification by concentrating security, monitoring, and operational controls where they matter most: Controlled Unclassified Information (CUI).

StreamEnclave gets you assessment-ready in a few weeks, with predictable cost and minimal operational burden, removing compliance barriers to obtaining defence contracts

Why This Matters Now

- CMMC is now required to participate in the DOD supply chain
- Certification is becoming a pre-condition to bid, not a post-award activity
- Companies that wait will be excluded from future defence contracts

Simple

Fast

Cost-effective

Protecting Future Revenue

While most cybersecurity spend is justified defensively, CMMC is one of the few cybersecurity investments that unlocks revenue rather than just preventing loss.

One contract win can pay for the certification many times over, but missing the deadline means losing revenue.

What Makes StreamEnclave Different

✗ The Reality of Traditional Compliance

Most CMMC initiatives are costly or stall because:

- The scope is too large
- The environment is too complex to address quickly
- Internal teams are overloaded and slow the process down
- Evidence is inconsistent or incomplete
- Compliance is treated as a one-time project
- Escalating consulting costs

✓ The StreamEnclave Approach

Directly addresses the key challenges:

- Scope explosion: solved by isolating CUI
- Operational complexity: solved by managed security
- Evidence gaps: solved by continuous logging and monitoring
- Audit stress: solved by standardized, repeatable artifacts
- Cost uncertainty: solved by a predictable subscription model

Criteria	Consulting	Cloud Enclave	StreamEnclave
Time to Readiness	12 - 18 months	6 - 12 months	8 - 16 weeks
Scope	Broad (often entire IT)	Medium	Targeted (CUI only)
Internal Efforts	Very High	Medium	Low to Moderate
Complexity	Very High	High	Low
Evidence	Manual, Variable	Complex	Standardized, continuous
Model	Project	Project	Subscription
Risk	High	Medium	Low
Costs	Very High	Moderate	Moderate

Compliance becomes simpler and faster.

Ready in a few weeks, not 12–18 months
 Reduced compliance scope
 Built-in security and monitoring

Audit-ready evidence generated continuously
 Delivered as a subscription, not a one-time project

How StreamEnclave Works

StreamEnclave is a dedicated, on-premise CUI enclave with security and compliance built in by design.

It provides:

- A clear boundary between CUI and non-CUI systems
- Controlled access to CUI
- Continuous security monitoring
- Centralized logging and evidence generation
- Clear shared responsibility matrix

Encryption

StreamEnclave uses FIPS 140-2 validated cryptography aligned with DoD and CMMC expectations.

- Encryption at rest for all CUI data
- Encryption in transit for all access and transfers
- Cryptographic controls aligned with NIST 800-171
- StreamScan never accesses client CUI data

Segmentation

A segmented CUI enclave isolates sensitive systems and provides a clear, auditable assessment boundary.

- Dedicated on-premise enclave for CUI only
- Network segmentation isolates CUI systems
- No impact on the rest of the IT environment
- Clear, auditable boundary for assessors

Why This Matters

- Fewer systems in scope
- Fewer controls applied organization-wide
- Less documentation
- Faster audits
- Lower risk of non-conformities

Simpler

Faster

Cheaper

Why StreamEnclave Makes Financial Sense

Traditional compliance paths require:

- Hundreds of internal hours
- Multiple security tools
- Multiple vendors
- Ongoing consulting support

StreamEnclave:

- Reduces internal effort
- Consolidates tools and services
- Provides predictable monthly cost
- Accelerates time to revenue eligibility

“

Having collaborated closely with StreamScan on achieving CMMC certification, I can personally attest to their professionalism, technical expertise, and dedication to excellence. StreamScan distinguishes itself through a comprehensive service offering that includes cutting-edge tools, deep technical knowledge, managed detection and response, and incident response capabilities. Their commitment to protecting clients against evolving cyber threats is unmatched. I highly recommend StreamScan to any organization seeking reliable, innovative cybersecurity solutions backed by exceptional service and a true commitment to excellence.

- Ghislain Gamache, IT Manager, ATLAS Aeronautik

Don't be late to the defence market.

CMMC is now a business gatekeeper, not technical checklists. StreamEnclave allows you to:

- ✓ Be ready in as little as 3 months
- ✓ Control cost and complexity
- ✓ Reduce audit risk
- ✓ Protect future revenue
- ✓ Compete with confidence in the defence sector

StreamEnclave by StreamScan
Reduce scope. Accelerate compliance.
