Important Notes:

- HAI recommends only using 85% of the Ultimate Torsional Strength shown above in table A1 for 2-3/8 to 3-1/2 helical piles. All other diameter helical piles are recommended to be use to 95% of their Ultimate Torsional Strength.
- When using helical piles for tieback or any battered application with more than 10 degrees from vertical, HAI recommends only using 80% of the Ultimate Torsional Strength which will only apply to 2-3/8 and 2-7/8 diameter helical piles.
- * The ultimate torsional strength values shown above were determined by statistical analysis of laboratory testing results except for values with an asterisk next to them. Values with an asterisk next to them are calculated ratings.
- The capacities shown above in table A for ultimate tension strength and compression load limit are calculated ratings not determined by field tests.
- Our unique facility contains a torsion testing machine allowing us to test all our products. Helical Anchor Inc. is committed to testing and improving all of our finished products to provide the best quality for the customer. This table will be updated when testing is completed for those products with an asterisk
