

### **Collaboration ESSTS + MDS TS group**

- MDS: few TS specialists (Parkinson's++), and mostly adult neurologists.
- Interest of the MDS-TS group: mostly publishing? whereas ESSTS: about meetings, collaborations.
- For Marianna's paper: it is her project, and so MDS TS group did not own authorship. It is supposed to be a viewpoint and to start a conversation.
- About important topics like renaming Tourette, we should collaborate together.
- Should we collaborate for the complimentary medicine review? It may be strange to say no.
- We should mention to them at the next meeting that we could collaborate for future and important topics.
- We could meet via Zoom (with Tamara and Yulia) or in Italy to discuss this.
- For ESSTS paid members who are scientifically active, they could participate in ESSTS projects.
