

# INSTALLATION INSTRUCTIONS

## IP/PR SPLASH PANEL KIT P/N 629087592

### WARNING:

Disconnect power to the unit before servicing. Follow all lock out/tag out procedures established by the user. Verify all power is off to the unit before performing any work.

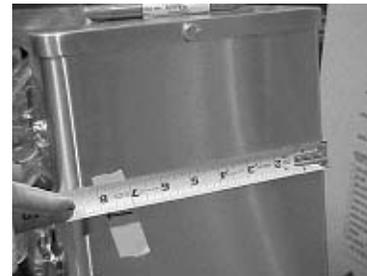

**Failure to comply could result in serious injury, death or damage to the equipment.**

### INSTALLATION PROCEDURE

1. Unplug the machine.

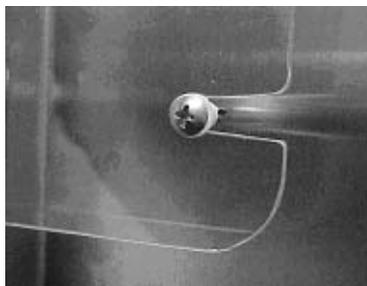

2. Measure 5-3/4" from the top of the unit and 7-3/4" from the back of the unit. Make a mark at this location. Repeat for other side of unit.

3. Insert the self-drilling, self-tapping screw through the eyelet then through the hole in the splash panel and finally through the nylon retaining washer. Line up the tip of the screw with the mark made in the previous step. Using a power driver, attach the splash panel to the machine. Repeat for other side of unit.

4. Let the splash panel swing down and rest on the drip tray. Note the location of the splash shield stop channel on the side of the machine. Insert a screw through a nylon shoulder washer. Using a power driver, attach the screw to the machine at the end of the stop channel. Repeat for other side of unit.

5. Check to make sure the splash panels can swing freely. If not, loosen the top screw slightly. Plug the unit in.
