

INSTALLATION INSTRUCTIONS

Front Cover Kit For CORNELIUS "I" Series Ice Makers

This front cover is to be used in place of the cover supplied with the adapter kit. This cover will completely cover the entire opening created when the ice maker is installed on the model 3030 or model DB200 family of Ice/Drink dispensers.

NOTE: When installing the adapter plate, be sure that the gasket material is in place and apply sealant around the perimeter of the ice maker/dispenser joint. Ideally, the metal of the adapter plate should be isolated from the ice maker to eliminate condensation and dripping.

1. Remove the cover plate supplied with the adapter plate. Retain the knurled screw.
2. Place the cover plate supplied in this kit in place on the ice/drink dispenser and secure it with the knurled screw.
