ICEOTOPE KUL BOX XE7740

The Iceotope **KUL BOX XE770** rack server delivers significant advantages for environments where enhanced thermal management, quiet operation and maximum performance are critical and a modular design which allows scalability for any size deployment.

This server uses liquid cooling to capture almost all of the heat generated by the system, which is then released outside through a liquid-to-air cooler.

Iceotope technology reduces cooling costs by up to **83%** and water use by up to **96%** vs. air-cooled servers.

ENHANCED COOLING RESILIENCY

In the event of external power interruption or failure, internal dielectric fluid pumps will maintain system cooling for up to 5 minutes if backup power is still supplied to the rack.

The volume and heat capacity of the dielectric fluid used in Iceotope servers provides a significant safety buffer, enabling extended UPS runtime before its thermal limits are reached. If external power is resumed within 5 minutes, the system will return to normal operation without additional intervention.

MODULAR SCALABLE DESIGN
