

Bass Trap Core Cinema Series

Engineered to mitigate the impact of the low frequencies, the Bass Trap is an essential component of any home cinema. Bass Traps reduce low frequency room modes, diminishing the effect of standing waves. The Bass Trap Core features a weighted pistonic membrane designed to target absorption from 100Hz to 132Hz.

Composition

- Pistonic diaphragmatic membrane (PDA)
- HMDF structure
- Calibrated cell acoustic foam

Finishes

(FG - PP) Painted Primer Finishes

(W07)
Black
