

FRANLABTM

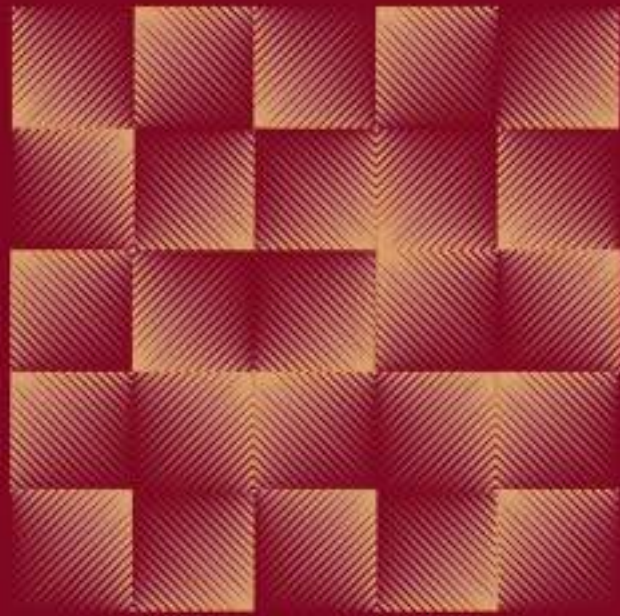

FRANGIVISTA DESIGNED TO ATTRACT,
BUILT TO LAST

A statement of stature:
artisanal mastery and
design crafted for
those who lead.

Welcome to FRANLAB™

The nobility of stainless steel and natural stone elevates the precision of electro-welded mesh, creating an architectural presence that feels both contemporary and timeless.

Since 2011, we have crafted high-end privacy panels conceived as true design features. Italian craftsmanship combines research, aesthetic sensibility and artisanal mastery in a process defined by uncompromising attention to detail. Every project is bespoke: carefully curated materials, meticulous workmanship, exclusive customisation and exceptional finishes. The result is privacy elevated — an expression of beauty, proportion and enduring performance. From concept to installation, we accompany each project with absolute care, integrating our screens into private residences and prestige commercial contexts, with customised solutions in seamless dialogue with the architecture and environment. A perfect equilibrium of beauty and purpose: a discreet presence that protects, defines and enhances space with refined architectural balance.

MADE IN ITALY

For us, Made in Italy begins with a decision rooted in culture and elevated by craft. It is the mark of a brand that pursues perfection in every detail, every surface, every finish. It means true care, exceptional workmanship and unwavering respect for noble materials.

That is why each piece carries a distinctive identity - communicating prestige even before the first touch.

It is the silence that
protects, the distance that
heals, the gentle boundary
between us and the rest of
the world.

It is being able to be,
without being observed.
Breathing without noise.
Living your own time.

Private

We design private outdoor spaces as personal refuges. Protected places where time slows down and the world remains outside.

We draw delicate boundaries, natural screens and quiet green presences that protect privacy without closing it off. Every detail is designed to create intimacy, balance and breathing space. For us, the private outdoor space is a place to be enjoyed freely: a personal landscape where you can feel safe, present, simply at home.

We listen to space, shape light, and give rhythm to matter. We transform places into experiences and details into presence. For us, every project is a silent dialogue between identity and atmosphere, designed to be experienced rather than observed.

Commercial

We shape public-facing spaces into experiences of distinction. We sculpt light, material and proportion to create settings of impeccable elegance - able to express identity with effortless authority.

Each project begins with a clear vision: to elevate the brand through sophisticated atmospheres, couture-level detailing and a quiet sense of balance - felt even before it is fully seen. For us, design is more than aesthetics; it is a signature language: the art of transforming space into an emotion that endures.

The FRANLAB™ modular system is the key to exclusivity: a flexible architectural framework that enables bespoke compositions, precisely calibrated to specific architecture, function and desire. Modules, finishes and materials come together with exacting precision, giving rise to distinctive, one-of-a-kind solutions - crafted to interpret the brand with coherence and character.

Listen to the earth,
follow the rhythm of
light, accompany the
shapes. Every project is
born from the encounter
between nature and
vision, transforming the
environment into an intimate
and profound experience.

Landscape

Each project begins with a precise reading of its context and is translated into bespoke solutions, conceived to ensure comfort, long-term performance and lasting spatial excellence.

Landscape architecture is a refined, multidisciplinary art - embracing the planning, design and stewardship of outdoor environments. It weaves together the natural and the built to elevate the aesthetic, ecological and functional character of a place. From parks and private gardens to urban plazas and waterfronts, it is guided by a commitment to sustainability, ecological renewal and the well-being of the community.

LIGHT AND SHADOW

FRANLAB™ reveals a quieter dimension of outdoor design, where protection, atmosphere and spatial rhythm are shaped by the movement of light. A refined interplay that transforms privacy into presence, and every boundary into a subtle expression of elegance.

Light becomes matter. Shadow becomes architecture.

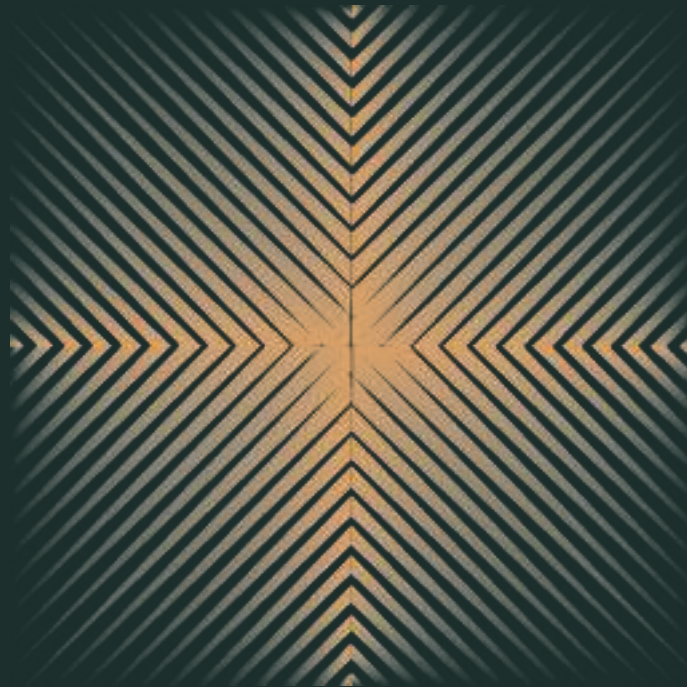

In landscape design, the shadow cast by a windbreak or privacy screen is not merely a byproduct of form, but an essential element of the project itself.

As the sun moves, shadows stretch, contract and shift direction, creating a natural rhythm that shapes perception, comfort and atmosphere. Beyond its functional role, shadow softens edges, adds depth and introduces a quiet sense of time passing. In this way, FRANLAB™ becomes more than a protective device: through its shadow, it becomes an active design tool, orchestrating mood, movement and spatial character across the landscape.

Maintenance, Sustainability & Environment

Designed to last.
Made to respect time, materials and place.

FRANLAB™ Frangivista is conceived for outdoor architecture where beauty, durability and responsibility coexist. Stainless steel and natural stone are selected for their long service life, low maintenance and ability to age with elegance in outdoor environments.

Stainless steel naturally protects itself over time through an invisible passive layer formed in contact with oxygen and atmospheric agents. Its surface may gently evolve in tone and appearance: a natural expression of the material, never a compromise in quality. This intrinsic behaviour enhances the authenticity of stainless steel and supports its long-term performance in outdoor environments.

Maintenance remains simple and essential: periodic cleaning, according to exposure and environmental conditions, helps preserve the surface quality and architectural presence of the system.

Sustainability begins with responsible material choices. Fully recyclable stainless steel, natural stone and production supported by SIA-MPL's on-site photovoltaic system create a material solution conceived to respect time, place and the environment.

Design & system overview

ESSENTIAL INFORMATION FOR ARCHITECTS, CLIENTS AND PROJECT DESIGNERS

FRANLAB™ is a modular outdoor privacy system designed to combine visual screening, architectural elegance and long-lasting performance.

MODULAR SYSTEM

Panels can be repeated, alternated or customised to create continuous screens, rhythmic partitions or bespoke outdoor

STAINLESS STEEL STRUCTURE

Robust posts and frame system in AISI 304L or AISI 316L stainless steel for structural stability and outdoor resistance.

CUSTOM FINISHES

A wide selection of stone and material finishes, glass and decorative inserts to match the identity of each project.

OUTDOOR PERFORMANCE

Designed to resist weather, UV rays, salt-laden air and daily wear, ensuring low maintenance and a refined appearance over time.

Suitable for:

Private gardens

Swimming pools

Terraces & rooftops

Hotels & resorts

SPA & wellness

Landscape projects

Commercial spaces

Project technical summary

FOR DESIGNERS, TECHNICAL TEAMS AND QUOTATION DEPARTMENTS

FIELD	Specification
MAIN STRUCTURE	Stainless steel mesh containment panels and post system
AVAILABLE STAINLESS STEEL	1.4307 AISI 304L - 1.4404 AISI 316L
PANEL CONFIGURATION	Modular system with privacy panels and decorative or glass insert elements
INSTALLATION	To be defined according to the project, substrate and structural requirements
CUSTOMISATION	Materials, finishes, colours, inserts and modular rhythm can be tailored according to project requirements.
MARBLE STONE INFILL SIZE	21-27 mm

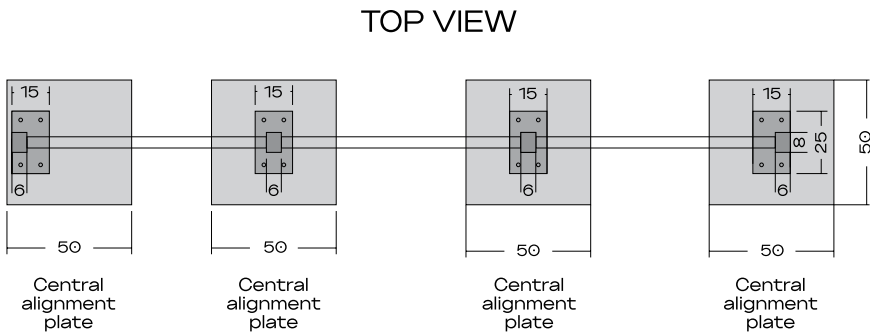

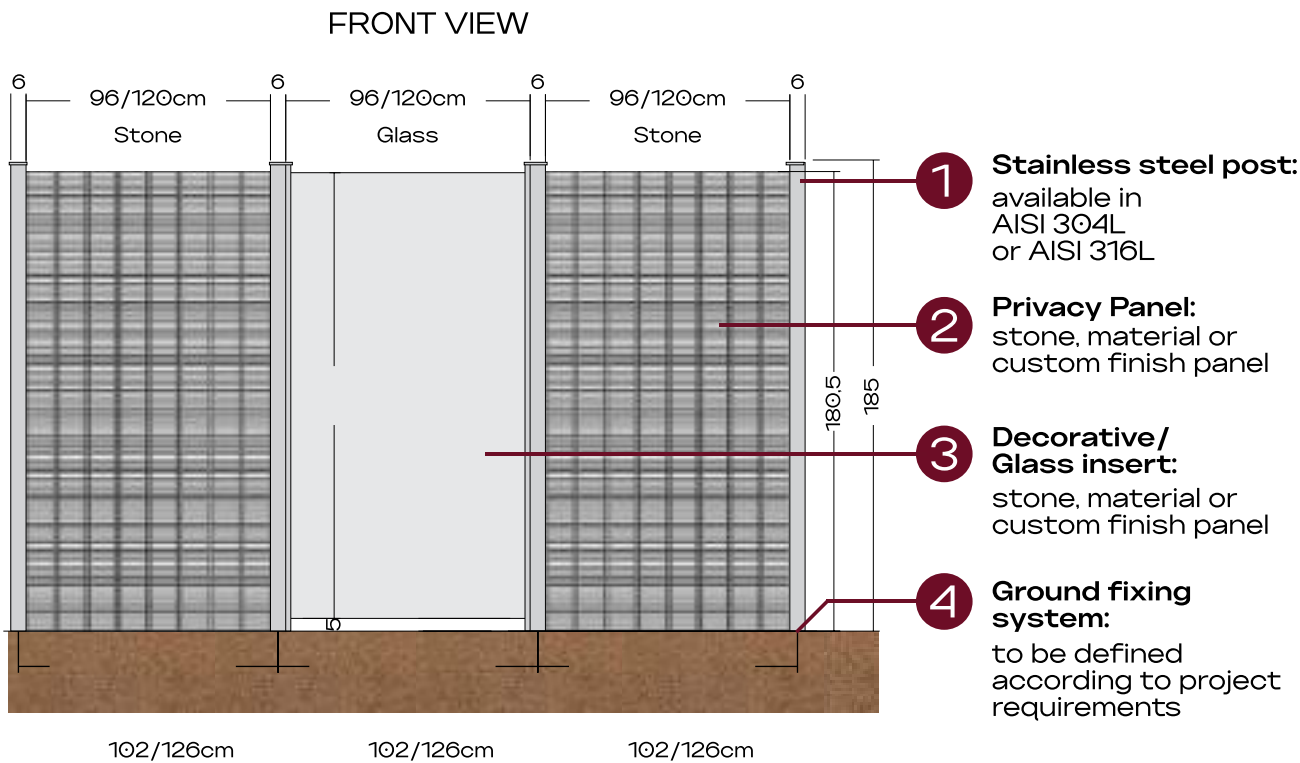

PRE-INSTALLATION CHECKS

THE FOLLOWING ASPECTS MUST BE VERIFIED:

- ✓ Type and condition of the supporting surface
- ✓ Load-bearing capacity of foundations or existing structures
- ✓ Exposure to wind and environmental conditions
- ✓ Presence of chlorides, salt mist or pool chemicals
- ✓ Correct selection between AISI 304L and AISI 316L
- ✓ Alignment, anchoring and drainage conditions

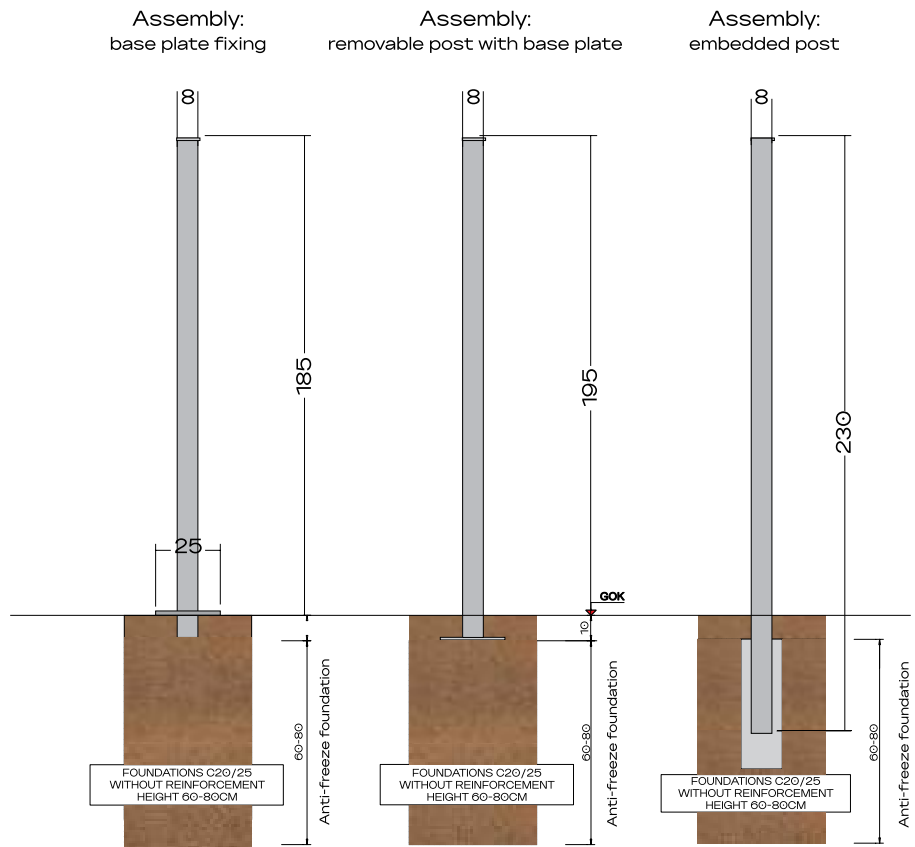

Modular composition

Technical view

Material: 1.4307 AISI 304L - 1.4404 AISI 316L

SIDE VIEW

Project Verification

Before installation, the load-bearing capacity of foundations and supporting structures must be verified according to expected loads and site conditions. Final dimensions, fixing system and structural details must be confirmed according to the specific project and installation site.

Technical drawings + fixing details available on request.
Recommended grade and installation solution must be confirmed according to environment, exposure and project requirements.

Materials and finishes

PERFORMANCE, DURABILITY AND LOW MAINTENANCE FOR LUXURY OUTDOOR SOLUTIONS

Panels and posts in stainless steel AISI 304L / AISI 316L.
Engineered for outdoor reliability, material integrity and effortless low maintenance — elevating luxury outdoor spaces with timeless confidence.

Material Selection

AISI 304L
Refined and reliable for standard outdoor environments. Suitable for residential and urban settings with normal exposure to the elements.

AISI 316L
Premium choice for coastal, poolside and demanding environments.
Recommended for marine environments or those with a high risk of corrosion.

Material selection

STYLISH AND RELIABLE FOR STANDARD OUTDOOR ENVIRONMENTS.
Suitable for residential and urban environments with normal exposure to the elements.

PREMIUM CHOICE FOR COASTAL, POOLSIDE AND DEMANDING ENVIRONMENTS
Recommended for marine environments or those with a high risk of corrosion.

Key features

Performance

- Screening concept: privacy and partial permeability designed to reduce wind discomfort without fully blocking airflow.
- Finish selection for intense UV exposure and high-temperature environments: tailored recommendations to preserve colour stability and long-term aesthetic performance.

Modularity & Installation

- Bespoke modular panels: dimensions and spacing defined per project constraints.
- Installation options: base plate on concrete / embedded post / integration with existing structures.
- Technical drawings, fixing details and project-specific engineering information are available upon request.

Materials

- Stainless steel frame & posts: grade specification available on request (recommended for coastal/high-salinity: AISI 316L).
- Electro-welded mesh: consistent joints and alignment; suitable for outdoor architectural screens.
- Natural stone infill: selectable by colour / grain / origin (project-based).
- Fixings: stainless steel; details provided per substrate (concrete/steel/ground).

Made in Italy welded mesh. Designed for landmark landscapes. Built to last—beautifully.

FRANLAB™ is intended as an outdoor architectural and landscape element. It must not be considered a structural guard, fall-protection barrier or safety device unless expressly designed, calculated and certified for that purpose.

Material Palette

For architects and landscape designers, selection is a design tool: stone colour/grain and stainless finishes define the perceived light response and durability of the screen.

NERO EBANO MARBLE

From a quarry in the Bergamo hills comes Nero Ebano, the only black marble extracted in Italy. Also referred to as Nero Assoluto Black, it is prized for its profound, perfectly even colour. Monolithic when used alone, it reveals new depth when paired with other marbles in sophisticated polychromatic compositions.

VERONA MARBLE

It is considered the finest marble in the province of Verona and is regarded as the red marble by definition. Renowned worldwide for its distinctive colour, it features a rich spectrum of tones ranging from light brick red to soft pink-red. Striking on its own, it also pairs beautifully with other stones in refined, polychromatic compositions.

THASSOS MARBLE

Is quarried on its namesake Greek island. Widely regarded as one of the world's finest natural white marbles, it is distinguished by a crystalline structure with granules visible to the naked eye, creating characteristic reflections. Luminous and refined on its own, it brings exceptional depth and contrast when paired with other marbles in sophisticated compositions.

VERDE ALPI GREEN MARBLE

Is quarried in Valle d'Aosta. Its palette ranges from light green to deep, blackish green, and is distinguished by fine white veining that lends the surface a remarkably sophisticated texture. Expressive on its own, it also pairs beautifully with other marbles in refined, polychromatic compositions.

WHITE CARRARA MARBLE

It is Italy's most iconic and celebrated marble, quarried in the Apuan Alps of Tuscany. Known worldwide for its distinctive white tone with a subtle light-grey nuance, it is also prized for its crystalline structure. Timeless on its own, it pairs elegantly with other marbles in refined, polychromatic compositions.

YELLOW SIENA MARBLE

Is quarried in the Tuscan hills. A crystalline stone with a delicate golden-yellow base, it is defined by veining that moves from ivory white and pale yellow to warmer ochre and brown tones. Appreciated for its brightness and nuanced colour variation, it is striking on its own and equally refined in sophisticated pairings with other marbles.

Additional marble nuances and colour variations are available on request, allowing the creation of bespoke, high-end palettes tailored to the unique identity of each project.

Stainless Steel & Artistic Evolutions

Where stainless steel becomes architectural presence.

In FRANLAB™, stainless steel becomes the structural soul of an architectural vision: pure, durable and refined over time. Through bespoke finishes and Artistic Evolutions, privacy is transformed into a distinctive design statement, where matter, light and landscape meet in a unique expression.

Natural Finish – A Signature of Quality

FRANLAB™ Frangivista is supplied with an industrial finish, a conscious expression of material authenticity and contemporary refinement. Its surface preserves the essential character of stainless steel, revealing its purity, technical elegance and architectural strength.

Stainless steel naturally protects itself over time. Its surface may evolve in tone and appearance: a natural expression of the material, never a compromise in quality. Each supply is supported by material certificates, ensuring traceability, reliability and certified value.

Technical Elegance for Outdoor Architecture

On request, we provide bespoke consultancy for surface treatments that enhance the intrinsic qualities of stainless steel, elevating aesthetic refinement, surface quality and material integrity over time.

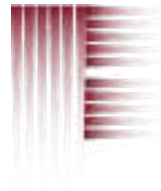

More than an architectural element, FRANLAB™ becomes a tailored design surface: a material signature shaped around space, function and brand identity. A material solution designed not only to perform, but to endure beautifully.

Artistic Evolutions – Privacy Shaped as an Exclusive Expression

FRANLAB™ opens to new creative possibilities through the integration of decorative art panels and bespoke surface finishes. Colour, texture and material expression transform the privacy screen into a distinctive architectural feature, designed to make every outdoor space more unique, personal and exclusive.

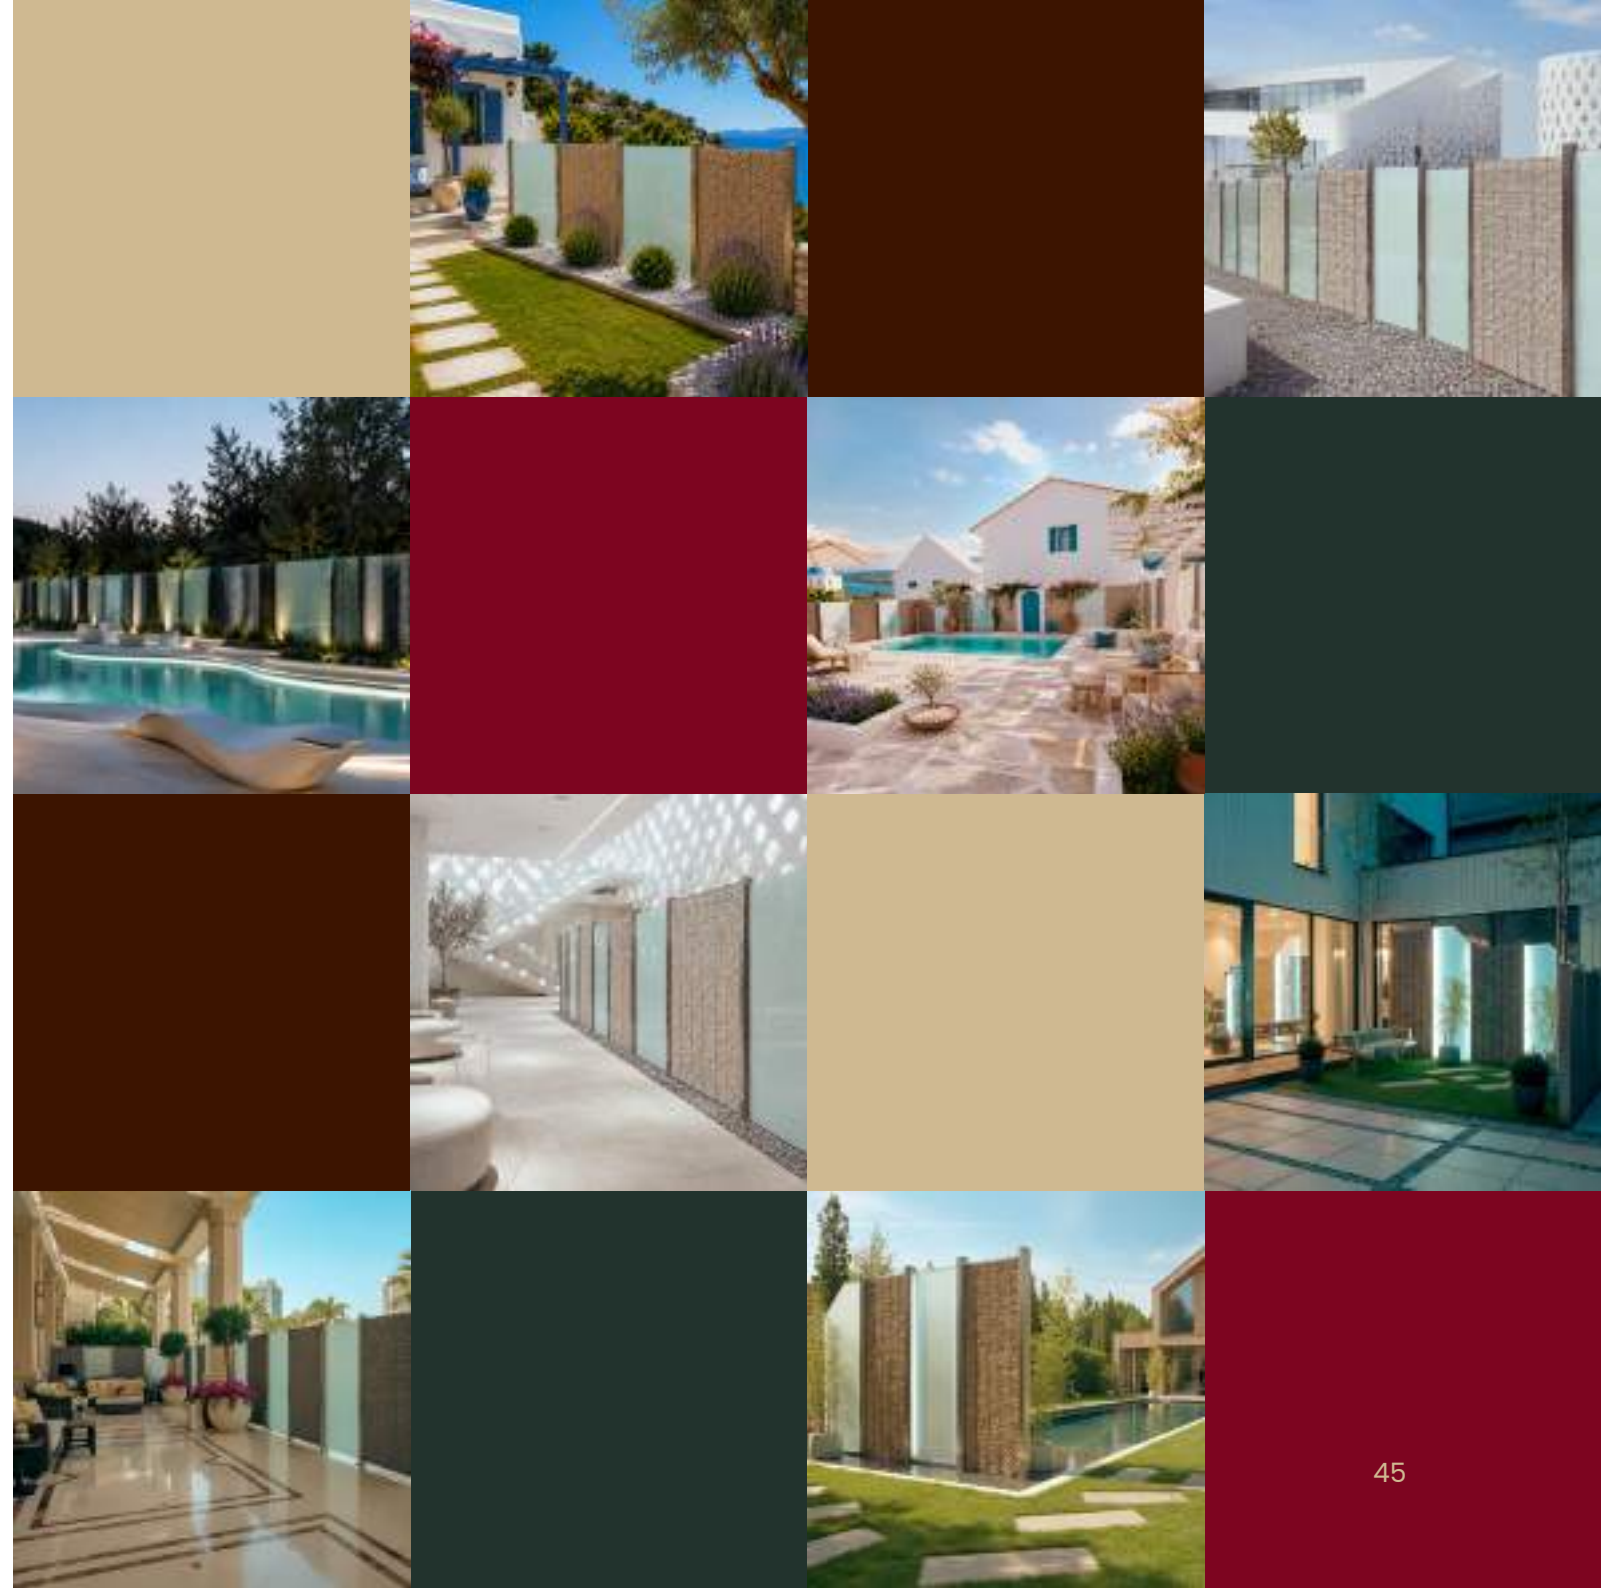

Each composition can be developed on request as a tailor-made project, where artistic inserts, finishes and visual rhythm are selected to reflect the identity of the place and the vision of the client.

For those who seek more than privacy, FRANLAB™ becomes a bespoke outdoor element where design, matter and Italian craftsmanship meet in a truly exclusive expression.

SPACES DESIGNED TO AWAKEN THE SENSES

Creating intimate spaces where beauty awakens the senses, tranquillity embraces the soul and every moment becomes an expression of refined living.
