More than rPET  
packaging solutions

**20-30%**

more output with the  
roll stack CAL HC 1200

**Formaspac**<sup>®</sup>  
packaging solutions

”

Starlinger is a reference as bottle to bottle lines producer, moreover is our main supplier of extrusion lines of PET sheet.

We know its technology, its way of working and for us is a reliable partner.

LUIS SASTRE  
FOUNDER AND OWNER  
FORMASPACK

The Spanish company Formaspac is an extraordinarily successful family-owned business located in Cantabria. Luis Sastre founded the business in 1995, which today is a leading company for food and beverage packaging solutions in Spain. Formaspac counts on recycled material ever since to produce rPET sheet from post-consumer recycled flakes.

#### **From Flake to Sheet. From Bottle to Bottle.**

In the past year, Formaspac invested in state-of-the-art technology and opened new operations and plants. They run four Starlinger viscotec sheet lines, and two Starlinger bottle-

to-bottle PET recycling plants with solid state polycondensation (SSP) technology for food grade treatment. We talked to Ana Sastre Gómez about Formaspac's decision to go into bottle-to-bottle recycling. "Formaspac has been dedicated to the transformation of recycled PET for 25 years. It is a great opportunity for us to profit from our knowledge and to diversify to other activities. The change to circular models and to PET is already a fact, in this sense, presents big opportunities."

Formaspac equipped a viscoSHEET line with the roll stack CAL HC 1200, and increased the efficiency of the line. 20-30% more output on this line is produced thanks to the new set-up.

#### **CAL HC 1200**

Automatic controllable rollstack for maximum throughput and excellent sheet surface quality.

- Larger extruder throughput with same downstream width
- Maximized investment-to-output ratio
- Outstanding surface quality of sheet
- varioGAP and autoGAP function
- Ideal for both PP and PET
