

# CARTON PACK

## Global Packaging Expertise in Food Industry

The deCON technology fits perfectly in our strategy to upgrade our existing production to meet sustainability and quality goals.

GIANNI LEONE  
CEO, CARTONPACK S.P.A.

CARTON PACK provides its services on a global level. It offers to the market its expertise in customized projects development, with innovative packaging solutions lined up with international market trends.

### The Company is structured in 3 business units:

1. Production of packaging for Fresh Produce Industry
2. Production of packaging for Food Industry in general
3. Production of plastic rolls for converting and packaging

The approach adopted in the development of new packaging solutions is driven by the enhancement of the brands interested, by the functional optimization of packaging and by the attention in the use of materials and industrial production processes according to eco-sustainable logics (cert. ISO 14001, TÜV - OK Compost, FSC and BRC).

With over 50 years of experience, CARTON PACK can boast exceptional performance in lead time and management of high volumes supplied to customers, assuring flexibility, speed and a high level of service and logistics organization.

With a production capacity that stands at 20,000 tons / year, CARTON PACK today outstands among the international market leaders relying on a logistics platform and a production facility spread over 100,000 sqm.

A company that cares of environment In CARTON PACK sustainability means the use of smart technologies in relation with energy and raw materials consumption - the protection of the environment at every stage of the pro-

duction and distribution process. It's not only a matter of developing packaging solutions with very low environmental impact, the company has implemented its facilities with a photovoltaic system that produces a peak power of 726 KW with a consequent average output of about 1,000,000 kW / year (PVGis data), thus lowering CO<sub>2</sub> emissions by around 530 tons / year. To move further on the sustainability road Carton Pack decided for a deCON50 from Starlinger viscotec.
