”Antura E-Legitimation”

Figur 1 – “Antura E-Legitimation”

In version August 2026 of Antura the add-on product “Antura E-Legitimation” is introduced. “Antura E-Legitimation” is a solution that makes it possible to authenticate users using Swedish personal identification numbers thru services such as “BankID” or “Freja e-ID”.

With “Antura E-Legitimation”, you get a secure and smooth solution for user login based on established Swedish e-IDs. The service makes it possible to identify users with high reliability, while the user experience is simple and familiar. This enables a high level of safety. Authentication solutions need to be configured in the system, so please contact your account manager at Antura who can help you further. Read more at <https://www.antura.se/Produkten/Antura-E-legitimation>.

Other

- Maintenance and bug fixes

Changes to system requirements

Changes in this release

No changes.

Upcoming changes

- Support for **Microsoft Office 2021** will end in October 2026, when Microsoft plans to end support. Antura will continue to support all Office versions that Microsoft supports. No features will be removed, but after this date, we will no longer be able to verify compatibility with Office versions that are outside of Microsoft's support period.

Changes to system requirements for on-prem hosting

Changes in this release

- Support for **Microsoft Windows Server 2016** ended with this release.
- Support for **Microsoft SQL Server 2016** ended with this release.
- Support for **Microsoft SQL Server 2017** ended with this release.
- Support for **Microsoft Sharepoint 2016 Server** ended with this release.
- Support for **Microsoft Sharepoint 2019 Server** ended with this release.

Upcoming changes

- Support for **Microsoft Windows Server 2019** will be discontinued as of 2027-06-01. This means that the last release that supports Microsoft Windows Server 2019 will be the May 2027 release.
