Portfolio overview

In the September 2026 release, an overview page for portfolios will be introduced. The page is accessed by clicking on the name of the portfolio and shows an overview of information from the projects included in the portfolio.

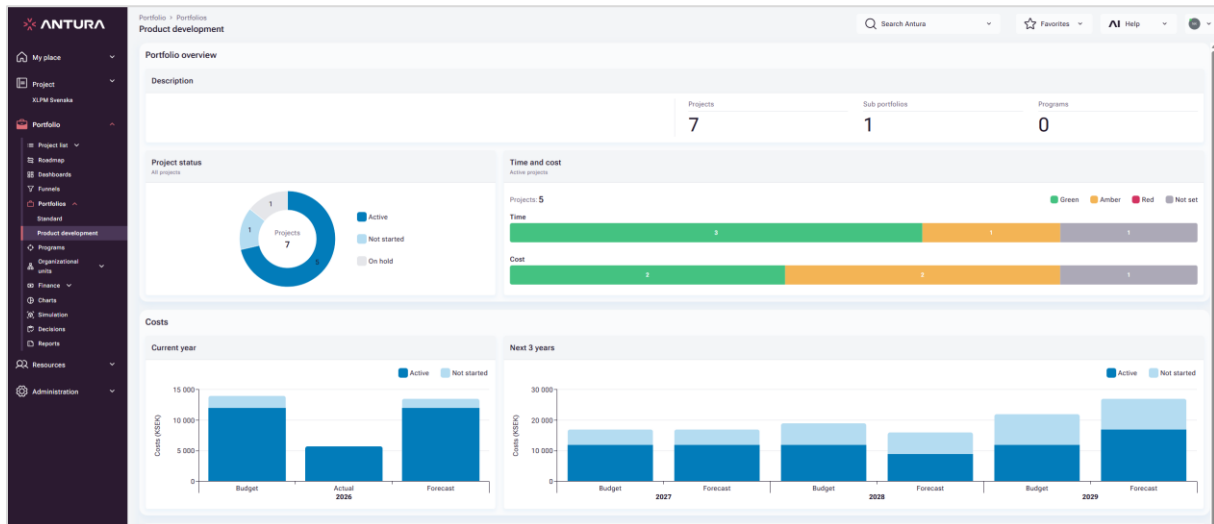

Figure 1 - Portfolio page

The page shows information about the project's status, status reporting, finances and resources (see help file for more details).

The navigation has been completed. Portfolio has been given sub-levels. Standard is today's list of portfolios and the page for the portfolio you are visiting is shown with the name under the option standard.

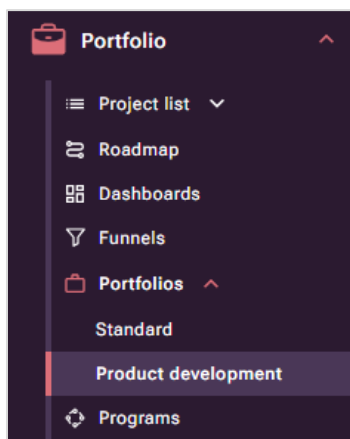

Figure 2 - Navigation

Click on standard to return to the list. The last visited portfolio remains in the navigation until a new portfolio is visited. Permissions are respected, so the "view all projects" permission is required for the current portfolio to see the details.

Kanban board in the action list

The action view in Antura has been supplemented with a column that shows which kanban board an action may be linked to, and it is also possible to filter out which actions are linked to a particular board.

Supplemental value in the chart view

The chart view portfolio has been supplemented with a missing calculation. It is the calculation "current year" for the different perspectives.

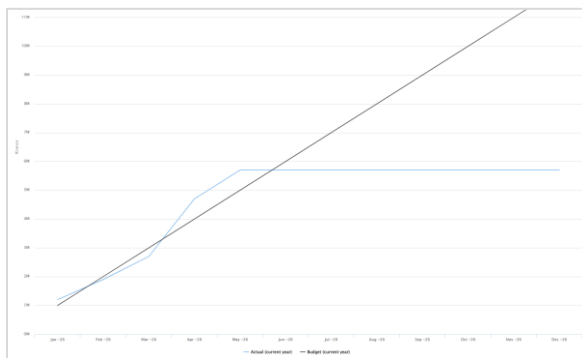

Figure 4 - Values for the current year

Antura Open API

Antura Open API has been expanded with an end-point for creating milestones. The following end-point is new:

- /app/api/v1/projects/{projectId}/tasksets/{taskSetId}/milestones

This, together with already existing APIs, provides great opportunities to manage schedule and base plan changes via API.

Support for deleting baselines

As our customers work successfully and for a long time in Antura, the data sets grow. Antura already has support for clearing certain data sets such as projects, resource data, etc. Now the support is being expanded to also be able to delete baselines. The deletion is offered as an option to activate, it is not activated automatically.

When cleanup is activated, a number of settings can be made for which baselines should be deleted. For example, "delete all baselines in finished projects" or "delete all baselines that are older than...".

It is important to know that baselines that have some form of dependency in the system are NOT deleted. We never delete, for example, baselines linked to decision points, status reports, latest official baselines, latest baselines or the baselines that are under editing.

If you want to activate deletion, Antura needs to assist with configuration. Contact your account manager for more details and possible planning.

Antura e-identification

In the August 2026 version of Antura, the add-on product Antura E-identification was launched, which is a secure and flexible solution for user login based on established e-IDs (read more on antura.se). In the September 2026 version, Antura e-identification is supplemented with support for Freja OrgID. This means that Antura e-identification can now also be used by organizations that use Freja's solution for digital organization IDs.

Other

- Maintenance and bug fixes

Changes to system requirements

Changes in this release

No changes.

Upcoming changes

- Support for **Microsoft Office 2021** will end in October 2026, when Microsoft plans to end support. Antura will continue to support all Office versions that Microsoft supports. No features will be removed, but after this date, we will no longer be able to verify compatibility with Office versions that are outside of Microsoft's support period.

Changes to system requirements for on-prem hosting

Changes in this release

No changes.

Upcoming changes

- Support for **Microsoft Windows Server 2019** will be discontinued as of 2027-06-01. This means that the last release that supports Microsoft Windows Server 2019 will be the May 2027 release.
