HOMEOWNER EMERGENCY LEAK PROTOCOL

DUE TO HEAVY RAINFALL, YOU MAY BE EXPERIENCING MORE LEAKS THAN EVER BEFORE.
DON'T PANIC...WE ARE PROVIDING THESE EMERGENCY LEAK PROTOCOL TIPS TO MINIMIZE YOUR PAIN!

1 GENTLY POKE A HOLE IN THE CEILING

Where dampness is occurring using a screwdriver or pen to mitigate further damage to the ceiling and direct the flow of releasing water.

2 PLACE TOWELS AND BUCKETS

Place towels and buckets or large bowls under the drip point to collect the water.

3 REMOVE PERSONAL BELONGINGS

Remove personal belongings and furniture from the area to prevent damage to the items.

4 LIFT CARPET AND PLACE TOWELS

Lift carpet and place towels at wet walls and on wet windowsills. Replace towels as needed.

5 TURN OFF POWER TO LIGHTS

Turn off power when water is leaking at electrical fixtures. Allow water to drip out of the fixture into a bucket. If water collects in a fixture bowl, simply remove and dump it.

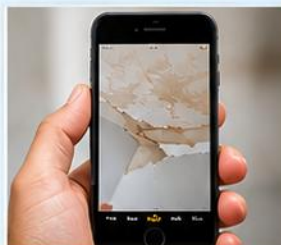

6 LOOSE DRYWALL AND PLASTER

Loose drywall and plaster is typically not a serious health risk. Do not remove large sections. Contact management for repairs.

7 REMOVE LEAVES AND DEBRIS

Remove leaves and debris from deck areas and window tracks to prevent damming.

8 DOCUMENT WITH PHOTOS

Capture what you discover with photos. This helps management and our team respond quickly.
