Power Pack

# Security/IT Edition

5 Automations Every IT Team Needs  
to Stay Secure.

# Trace Every Policy Exception

Stay compliant by catching every exception before it becomes exposure.

Prompt

“Identify all mentions of temporary access, exceptions, or bypasses across Slack, tickets, and docs. List who approved each, when it happened, and build a shared exception log for compliance review.”

# Incident Ownership & Handoff Clarity

Prevent dropped balls during active IT incidents by making ownership and next steps explicit.

Prompt

“List all active incidents and escalations. Identify the current owner, required next action, and any blockers. Generate a clear handoff summary and post it to the relevant IT and leadership Slack channels.”

# Post Incident Review Automation

Turn resolved incidents into clear, shareable learnings in seconds.

Prompt

“Pull all alerts, tickets, and conversations related to this resolved incident. Generate a structured post-incident review with root cause, impact, and recommended follow-up actions.”

# Hidden Apps Report

Uncover unapproved tools and workarounds across your org.

Prompt

“Scan Slack messages, onboarding docs, and IT tickets for mentions of unapproved or off-platform tools. Group results by department, note frequency of use, and summarize potential security risks, then send the report to department managers for review.”

xdge

# Compliance Reports, Done For You

Keep leadership updated without the noise.

Prompt

“Summarize all exceptions, alerts, and escalations from the past month. Highlight key patterns, what’s resolved, and what’s at risk, automatically deliver the brief to leadership channels.”
