

Refractions

A refraction is a test to measure and update your prescription for eyeglasses. Our Ophthalmologists will first examine the health of your eyes in addition to any potential eye medical conditions. Once they examine and evaluate your eyes, a refraction will be performed if clinically indicated.

Many medical insurance companies, including Medicare, do not cover refraction costs. Refractions are only offered for an out-of-pocket charge. Payment will be collected at the time of service as Ophthalmology Associates of San Antonio is only contracted with medical insurance companies and does not participate in vision insurance plans. If your medical insurance company does cover the cost of your refraction, we will bill your insurance company. However, you remain responsible for payment if coverage is denied.

The charge for this service is **\$85.00** and is due at the time of service.
