

Forged Fire Tools

Hand forged in the United States using traditional blacksmithing techniques, these fire tools celebrate the character of the material and the marks left by the making process. Hammer textures, subtle variations, and a darkened steel patina reveal the hand of the craftsman in every piece.

Built for generations of use, each set is substantial in weight, restrained in form, and available as either a freestanding set with a forged steel stand or as individually mounted tools suspended from wall hooks.

Dimensions

Stand: 29" H
Fire tools: 28" H
