RISK STATISTICS

Since inception

14.6%	0.54	0.54	64.0%	-37.4%	65.5%
Deviation vs 12.7%	Sharpe vs 0.37	Sortino vs 0.35	Max gain vs 40.4%	Max DD vs -35.6%	% positive vs 61.8%

TER (total expense ratio) = % of average NAV incurred as charges, levies and fees for the rolling one and three-year period to 30 June 2026. A higher TER does not necessarily imply a poor return.

TC (transaction costs) are unavoidable costs incurred in administering financial products. Also calculated on rolling one and three-year periods to 30 June 2026.

Sharpe ratio: annualised return less risk-free rate, divided by standard deviation of returns. Higher is better.

Sortino ratio: similar to Sharpe but only penalises downside (harmful) volatility. Higher is better.

Performance is quoted from Morningstar at month-end on a NAV-to-NAV basis for a lump sum investment using Class A Net Asset Value (NAV) prices with income distributions reinvested (income is reinvested on the reinvestment date). NAV refers to the value of the fund's assets less the value of its liabilities, divided by the number of units in issue. Performance figures are quoted after the deduction of all costs incurred within the fund. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. All performances are annualised (ie the average annual return over the given time period). Actual annual figures are available on request from Client Service.

Policy objective — The fund adhered to the policy objective as stated in the Supplemental Deed
