

German Roach Treatment Preparation Sheet

We at Pesky Critters strive to perform the best possible pest treatment on your home. Following this prep sheet will help to speed up control of the targeted pest. Failure to follow the guidelines below will at minimum hinder our ability to treat effectively and, in some cases, prevent control from ever being realized.

Sanitation is a key component in eliminating German Roach infestations and you as the homeowner play a critical role in aiding us to solve your roach problem. Below are a list of steps that are important for you to complete before we show up for service.

You will need to be out of the house during treatment for approximately 1.5 - 2 hours unless you have made prior arrangements with the office.

Preparing for a German Roach Treatment.

- Clear all counter space of food items and dirty dishes
- Remove all items off of stove
- Remove items from top of refrigerator
- Pick up pet food and water bowls
- Place pet food in a sealed container
- Pick up laundry off the floor
- Take garbage outdoors
- Any pets need to be crated or removed from premises during treatment.
- DO NOT use any pesticides or baits before the scheduled appointment

After Treatment

- DO NOT use any pesticides
- Do not use any harsh cleaning chemicals for 3 weeks following the last treatment
- Clean up any spilled liquid or food
- Avoid leaving dirty dishes or scraps of food out
- Take garbage out every 2 days
- Complete any prep work the tech suggests before the next treatment if necessary.
