

Critical Loop – CLB-2300

Emission-Free, Silent Power

An all-in-one BESS plus inverter system, **CLB-2300** can reduce generator run-times in hybrid configurations and provide 1MW peak power independent of the grid, peak-shave, and time shift when grid-connected. Camlock connection points for rapid commissioning.

Critical Loop's custom control systems enable remote monitoring, remote control, and telemetry data.

1MW | 2.3MWh blocks can be paired together for 20MW+ output.

Features & Benefits

- Infinitely scalable system
- Conserves fuel in hybrid setups
- Can provide island power during blackouts
- Time-shifting for maximum energy savings
