AMSOIL EXTERIOR CERAMIC SPRAY

Product Code: CSFCN-EA

Protect your vehicle with a deep, glossy finish, extreme hydrophobicity, and up to 12 months of UV defense in one easy spray-on step.

Product Description

AMSOIL Exterior Ceramic Spray delivers SiO₂-based paint protection with up to 12 months of durability in a simple spray-on, wipe-off application. It is built for vehicle owners who want a deep, glossy finish and serious hydrophobic performance without the complexity of traditional ceramic coatings.

Sun exposure, rain, road film, and mineral-heavy water all take a toll on automotive paint and plastic trim. Over time, UV rays oxidize clear coats, water spots etch into surfaces, and unprotected finishes lose their depth and clarity. A quality ceramic spray creates a sacrificial barrier between your vehicle's paint and everything the environment throws at it, but most products require lengthy cure times or multi-step prep that turns a weekend wash into an all-day project.

EXTREME HYDROPHOBICITY FOR FASTER DRYING AND FEWER WATER SPOTS

Water sitting on painted surfaces is the primary cause of mineral etching and water spot formation. AMSOIL Exterior Ceramic Spray uses advanced SiO₂ ceramic technology to create a surface that sheds water rapidly, forcing droplets to bead and roll off before they have a chance to evaporate and leave deposits behind. This dramatically cuts drying time after a wash, which is especially useful on larger vehicles like trucks, SUVs, and trailers where hand-drying every panel is time-consuming.

UV PROTECTION FOR PAINT AND PLASTIC SURFACES

Prolonged UV exposure breaks down clear coat and causes painted surfaces to fade, while exterior plastic trim turns chalky and gray. AMSOIL Ceramic Spray provides a protective layer that shields both painted and plastic surfaces against UV damage, helping maintain the original color and finish. Vehicles that spend most of their time outdoors, from daily drivers parked in open lots to trucks and motorcycles stored without covered shelter, benefit the most from consistent UV defense.

ENHANCED GLOSS WITH ZERO CURE TIME

Many ceramic spray products require a waiting period before the vehicle can be exposed to moisture, limiting when and where you can apply them. AMSOIL Exterior Ceramic Spray requires no cure time. You spray it on, wipe it off with a clean microfiber towel, and the surface is immediately protected. The formula enhances gloss on contact, adding visible depth and reflectivity to your paint. It works well as a standalone protectant after a wash or as a topper over existing coatings to refresh hydrophobic performance.

SIMPLE APPLICATION, LONG-LASTING RESULTS

The spray-on, wipe-off format makes this product accessible to anyone, not just experienced detailers. After washing with a quality car shampoo, park in a cool, shaded area, spray one panel at a time working from the top down, and wipe with a high-quality microfiber towel. Avoid over-saturating the surface to prevent streaking. That single application protects for up to 12 months, which

means you can apply it a couple of times a year and maintain continuous coverage through every season.

COMPATIBILITY AND SURFACE USE

AMSOIL Exterior Ceramic Spray is safe for use on painted surfaces and exterior plastic trim. It pairs well with AMSOIL High-Foam Car Shampoo for surface preparation before application. For best adhesion, make sure the surface is completely clean and free of contaminants before spraying.

Frequently Asked Questions

Q1: What vehicles and surfaces can I use AMSOIL Exterior Ceramic Spray on?

AMSOIL Exterior Ceramic Spray (CSFCN-EA) is designed for use on a wide range of vehicles and equipment, including auto/light trucks, motorcycles, ATVs, UTVs, snowmobiles, marine outboards, PWCs, heavy-duty on-road and off-road vehicles, and agricultural equipment. It protects both painted and plastic surfaces against the elements, making it versatile enough for virtually any exterior surface across your fleet.

Q2: How does AMSOIL Exterior Ceramic Spray protect my vehicle's paint?

AMSOIL Exterior Ceramic Spray contains the latest SiO₂ ceramic technology and is designed with extreme hydrophobicity to repel water, enhance gloss, and reduce water spotting. It also provides UV ray protection to help prevent paint fading and oxidation. Verified buyers report long-lasting shine, paint protection, and a dust-free finish after application.

Q3: What is SiO₂ ceramic technology in AMSOIL Exterior Ceramic Spray?

SiO₂ refers to silicon dioxide, which is the active ceramic compound in AMSOIL Exterior Ceramic Spray. This technology creates an extremely hydrophobic layer on painted and plastic surfaces that repels water rapidly, enhances gloss, reduces water spotting, and cuts drying time. The SiO₂-based coating provides protection against the elements for up to 12 months with a single spray-on, wipe-off application.

Q4: How does AMSOIL Exterior Ceramic Spray compare to traditional wax or sealant products?

Unlike traditional waxes that may require extensive buffing and cure time, AMSOIL Exterior Ceramic Spray requires no cure time and applies easily with a simple spray-on, wipe-off process. It provides protection for up to 12 months, which is significantly longer than most conventional wax products. Its SiO₂ ceramic technology delivers extreme hydrophobicity that sheds water rapidly, reducing water spotting and cutting drying time more effectively than standard wax or sealant approaches.

Q5: How do I apply AMSOIL Exterior Ceramic Spray and how long does the protection last?

First, wash your vehicle with AMSOIL High-Foam Car Shampoo and park in a cool, shaded area. Ensure the surface is free of dirt and debris to avoid scratching. Working from the top down, spray the product on and wipe it away with a high-quality microfiber towel, avoiding over-saturation to prevent streaking. The ceramic protection lasts up to 12 months, requires no cure time, and can also be used as a drying aid for quick detailing according to verified users.

Q6: Is AMSOIL Exterior Ceramic Spray safe for plastic trim and non-painted surfaces on my vehicle?

Yes, AMSOIL Exterior Ceramic Spray is formulated to protect both painted and plastic surfaces against the elements. Its SiO₂ ceramic technology provides hydrophobic protection, UV defense, and enhanced gloss on these surfaces without causing damage. Just ensure the surface is clean and free of dirt and debris before application to avoid any scratching during the wipe-off process.

Available Product Codes

Product Code	Package Size	Unit of Measure
CSFCN-EA	16 oz. Bottle	Each
CSFCN-CA	16 oz. Bottle	Case of 12
