# AMSOIL MICROFIBER WASH MITT

Product Code: G3914-EA

*Achieve a safer, swirl-free car wash with this plush microfiber mitt, offering superior control, durability, and easy maintenance.*

## Product Description

The AMSOIL Microfiber Wash Mitt is a thick, plush wash tool built to deliver a safer, more controlled hand wash with less effort and fewer swirl marks.

### REDUCES WASH-INDUCED SWIRL MARKS

Most wash-related paint damage happens during the contact wash stage. Standard chenille mitts can mat down and drag trapped contaminants across the surface under uneven pressure. The AMSOIL Microfiber Wash Mitt uses a dense 1500 GSM microfiber construction that holds dirt particles away from the paint surface and distributes pressure more evenly. The result is a noticeably gentler wash that helps preserve your clear coat over hundreds of washes.

### BETTER CONTROL THAN STANDARD WASH MITTS

A wash mitt that slips around on your hand is harder to use around edges, emblems, and tight body lines. This mitt features a stitched interior seam that keeps it seated on your hand, giving you more stability and consistent contact pressure across every panel. That added control makes it easier to work methodically and avoid the kind of uneven scrubbing that creates haze and micro-marring.

### SUPERIOR WATER AND SOAP RETENTION

At 1500 GSM, this mitt holds a significant amount of soapy water in each pass. More solution on the surface means better lubrication between the mitt and the paint, which reduces friction and further cuts down on swirl risk. It also means fewer return trips to the bucket, which speeds up the overall wash process.

### EASY CARE AND LONG-TERM DURABILITY

The mitt is fully machine washable. Use warm water with a mild liquid detergent free of dyes, fragrances, bleach, and softeners. Avoid fabric softener and chlorine bleach, both of which degrade microfiber performance. Wash separately from lint-producing fabrics to maintain the mitt's dirt-gripping properties, and air dry. Washing before the first use is recommended for best results.

## Frequently Asked Questions

### Q1: What vehicles or equipment can I use the AMSOIL Microfiber Wash Mitt on?

The AMSOIL Microfiber Wash Mitt (G3914-EA) is suitable for washing a wide range of vehicles and equipment, including auto/light trucks, motorcycles, ATVs, UTVs, snowmobiles, marine outboards, PWCs, heavy-duty on-road and off-road vehicles, and agricultural equipment. Its thick, plush design delivers lower surface pressures, making it gentle enough for any painted or finished surface across

these categories.

**Q2: Does the AMSOIL Microfiber Wash Mitt help prevent swirl marks and scratches when washing?**

Yes. The AMSOIL Microfiber Wash Mitt features a thick, plush design that reduces wash-induced swirl marks by lowering surface pressures compared to a standard chenille wash mitt. This gentler contact helps protect your vehicle's paint and clear coat during routine bucket washes.

**Q3: What is the GSM rating of the AMSOIL Microfiber Wash Mitt and what does it mean?**

The AMSOIL Microfiber Wash Mitt has a 1500 GSM (grams per square meter) rating, which measures the density and thickness of the microfiber material. A higher GSM indicates a thicker, more plush mitt with greater water and soap retention. At 1500 GSM, this mitt offers superior absorbency, meaning you make fewer trips to the bucket and can cut down on your overall wash time.

**Q4: How does the AMSOIL Microfiber Wash Mitt compare to a standard chenille wash mitt?**

The AMSOIL Microfiber Wash Mitt offers better control and lower surface pressures than a standard chenille wash mitt, thanks to its thick, plush design and stitched interior seam for added stability. Its 1500 GSM density provides excellent water retention, allowing you to make fewer trips to the bucket and reduce wash time compared to conventional chenille mitts.

**Q5: How do I wash and care for the AMSOIL Microfiber Wash Mitt to keep it performing well?**

AMSOIL recommends washing the mitt prior to first use for best results. Machine wash it warm with a mild liquid detergent that is free of dyes, fragrances, bleach, and softeners. Do not use fabric softener or chlorine bleach, and wash only with other non-linting materials to maintain its dirt-gripping properties. Wash with like colors as some may bleed, and air dry the mitt rather than using a machine dryer.

**Q6: Is the AMSOIL Microfiber Wash Mitt safe to use on all vehicle paint and clear coat finishes?**

Yes. The AMSOIL Microfiber Wash Mitt is designed to be gentle on surfaces, with its thick, plush construction specifically engineered to reduce wash-induced swirl marks and lower surface pressures during washing. The stitched interior seam provides excellent control, helping you safely and effectively wash painted and clear-coated surfaces without causing damage.
