

Kit Press (English)

The app that lets you speak... even after you're gone...

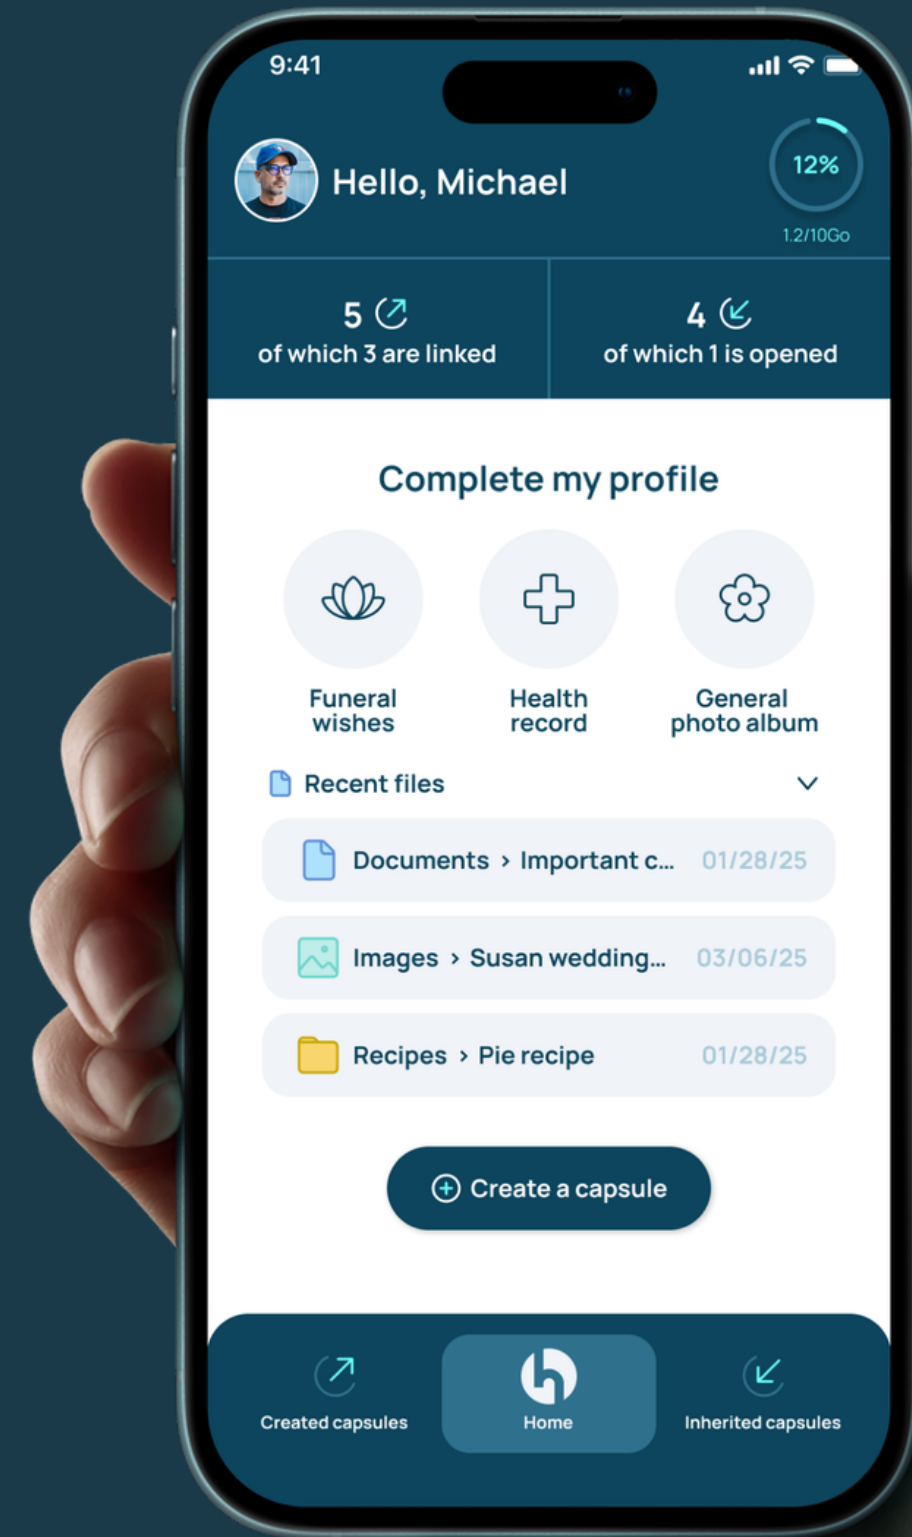

Hylest is an innovative app that allows you to automatically — and with complete security — pass on your memories, documents, access codes, and personal messages.

Whether for **personal, family, or practical reasons**, Hylest ensures that **nothing essential is lost or forgotten**.

Don't leave your loved ones guessing:

- let your family know that a **life insurance policy** exists,
- explain to your children **what truly matters in your home**,
- share **passwords** and **important digital instructions**,
- leave **a simple message of love, guidance, or farewell**,
- or **anything else that matters deeply to you...**

Hylest makes these transmissions natural, automatic, and reliable.
Because a simple oversight can sometimes change a life.

Today,

Our lives are now **entirely digital** — yet until now, there was no simple and secure way **to pass on personal data after death**.

Hylest addresses this universal need.

No matter your age, culture, nationality, or beliefs, we all leave behind digital traces and memories that others will one day have to manage.

The app makes it easy to pass on:

- your access codes,
- your important documents,
- your wishes,
- your personal messages,
- your memories,
- and even your **health record** and **funeral preferences...**

By doing so, Hylest helps loved ones avoid **complex procedures**, **unnecessary searches**, and **the loss of precious memories**, while supporting them **with care** during difficult moments.

Hylest Capsules

A capsule is a personal digital vault, intended for someone who matters to you: **children, parents, friends, partners, close contacts...**

Each capsule is **unique**: it is addressed to one single person.

You can add:

- text, audio, or video messages,
- important documents (PDFs, access codes, instructions, archives),
- photo memories,
- medical information,
- wishes and personal directives, and more...

Once your capsule is linked to your heir's Hylest account, they will see the capsule in their app – **but its content remains invisible and locked** until an authorized opening occurs.

Even when a capsule is **linked** to a specific person, it remains fully editable at any time.

The two worlds of the app

The capsules you send

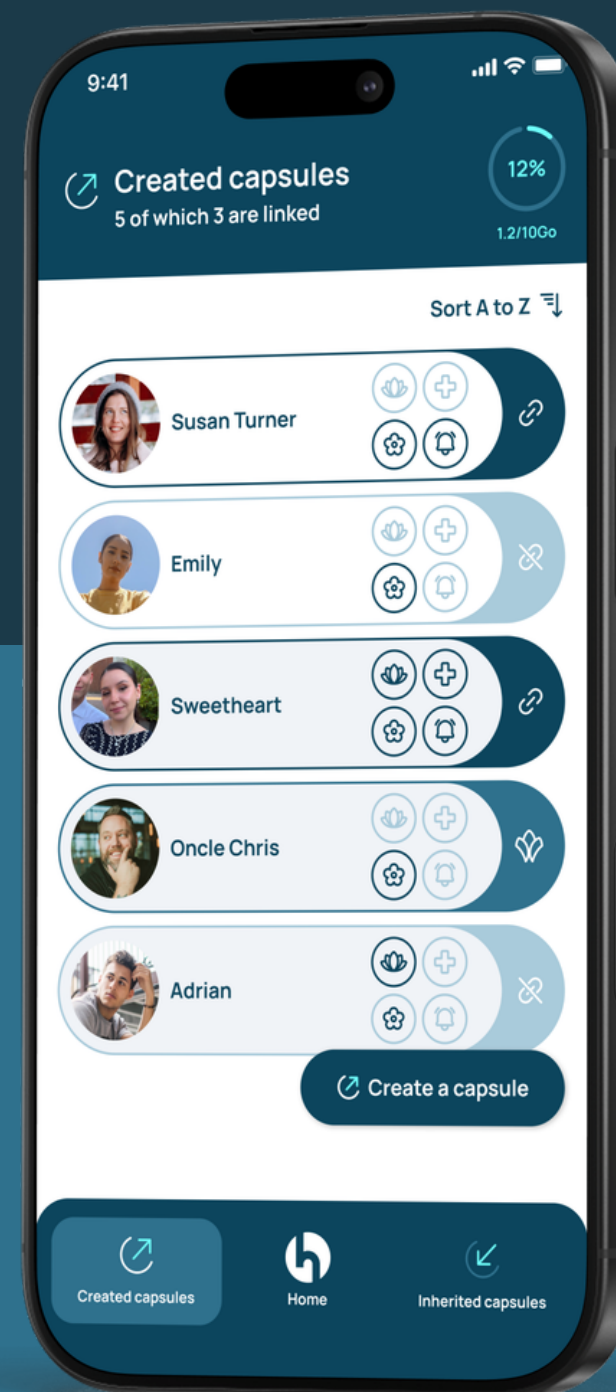

Created capsules

Create capsules for your loved ones:
**children, parents, friends, partners,
close contacts...**

Add files, messages, photos, videos,
instructions.

Organize them by theme: health,
wishes, memories, documents.

The capsules you receive

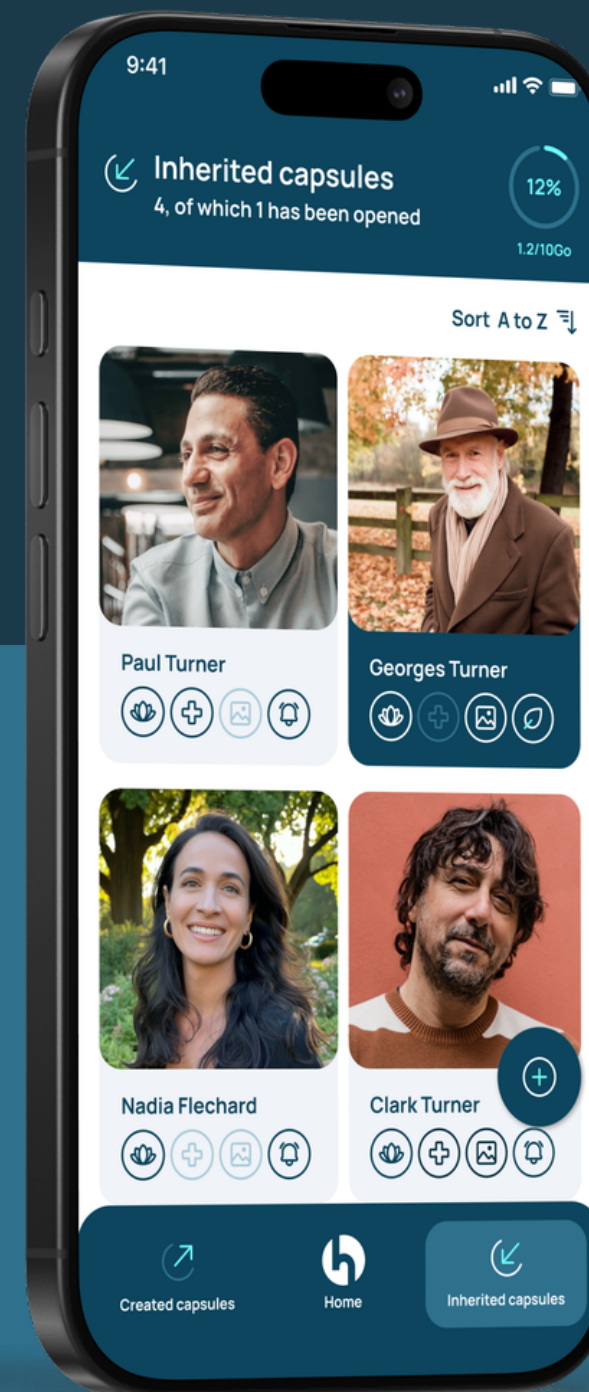

Inherited capsules

Receive capsules prepared by your
loved ones: **parents, partner,
grandparents, friends...**

Get a secure notification when a
capsule is opened.

View, download, and safely keep the
messages you receive.

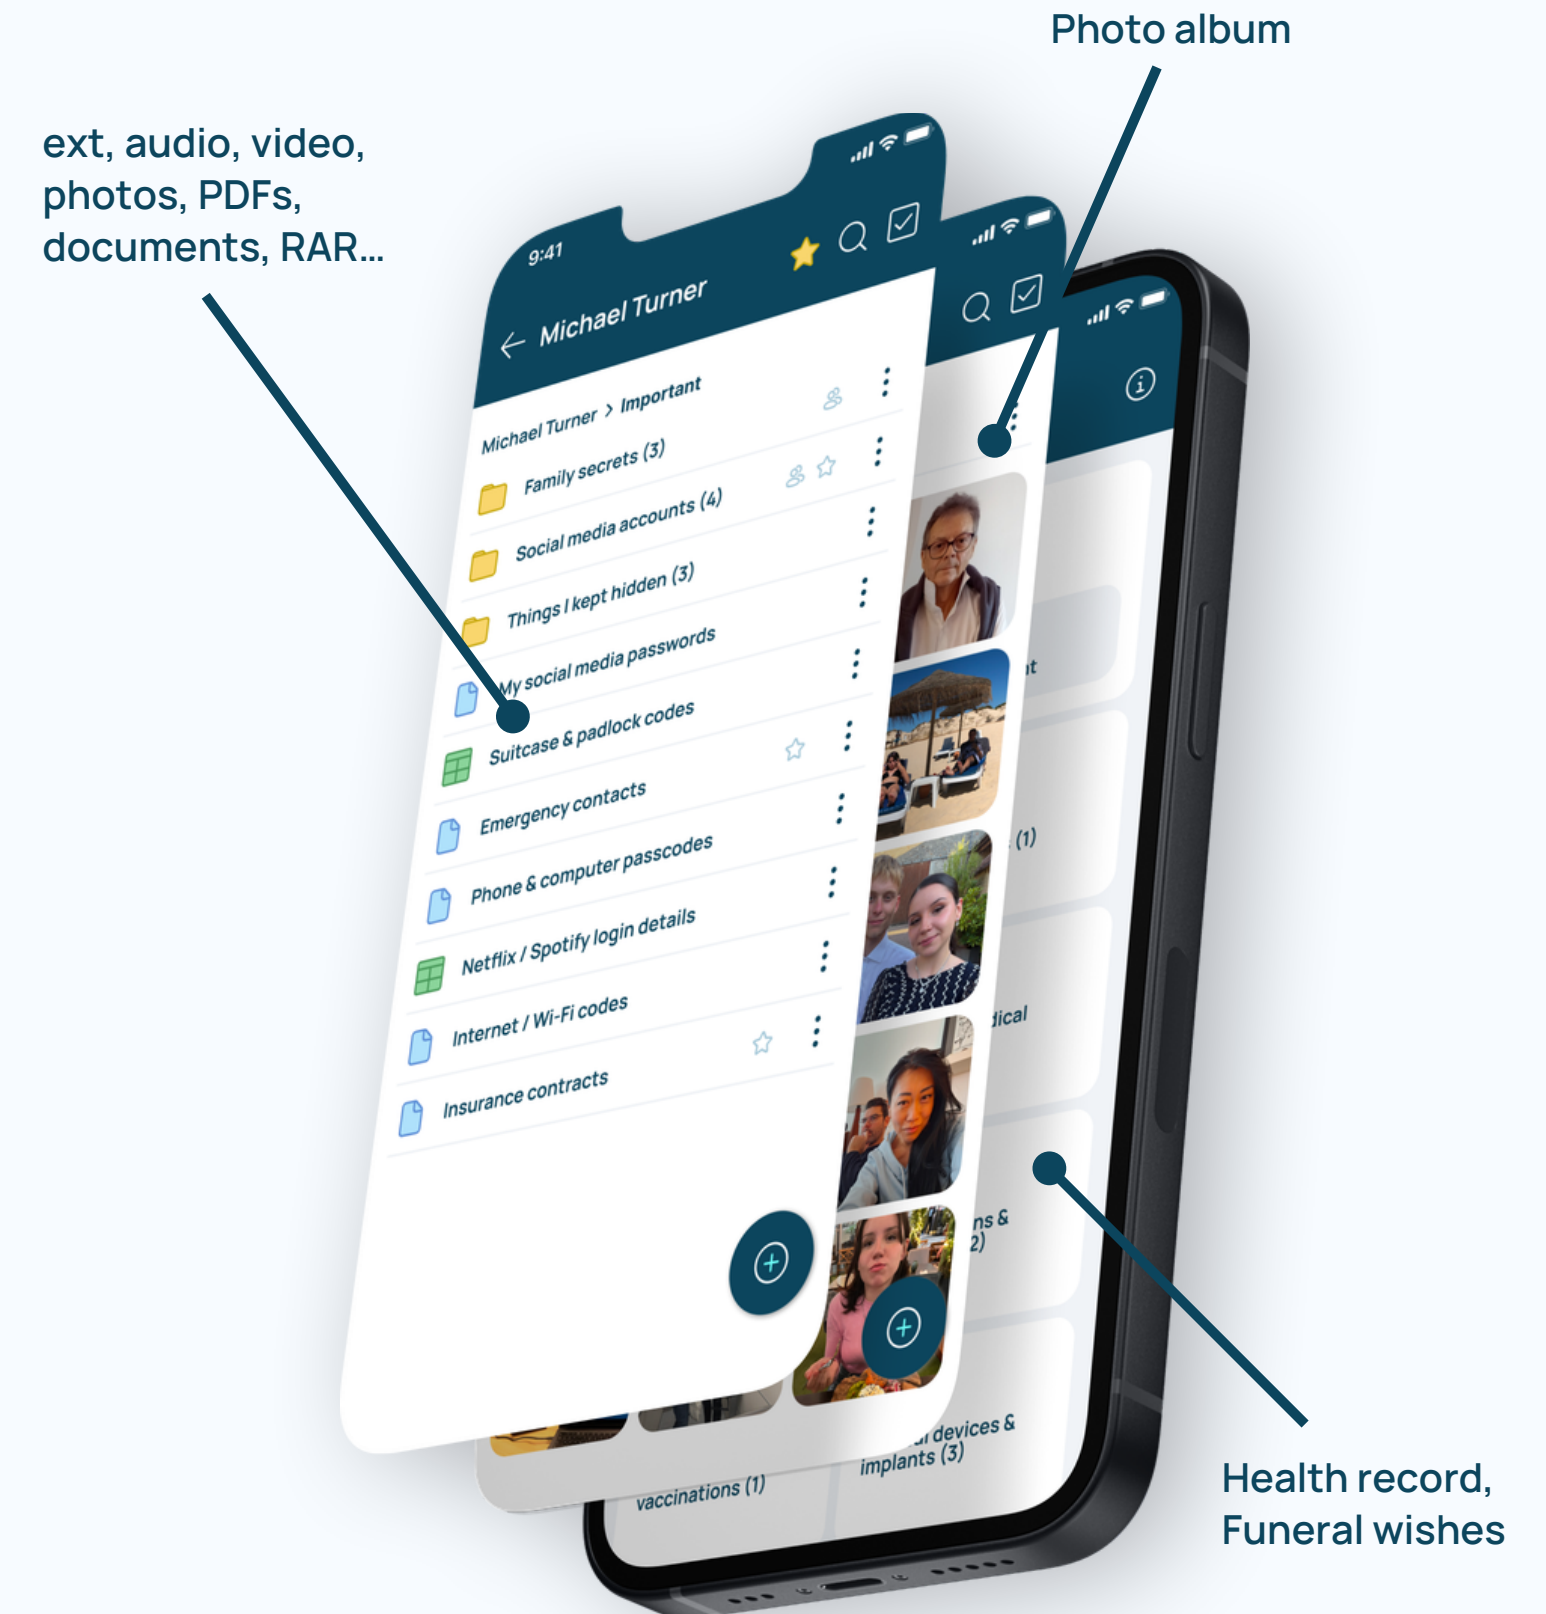

User experience

Simple. Intuitive. Essential.

Creating a Hylest capsule takes just one minute — **but its impact lasts a lifetime.**

-  **Create a capsule**
Think of someone who matters to you. Create a capsule in their name.
-  **Add what you want to pass on**
Insert your messages, videos, photos, documents, and personal access codes. Everything is stored in a secure, encrypted vault.
-  **Link your capsule**
Associate the capsule with your heir's Hylest account. It will be visible to them — but they won't be able to see its contents.
-  **Hylest takes care of the rest**
Once the capsule is created, Hylest and its Ender program handle everything. The capsule opens at the right moment, according to a controlled and secure opening protocol

Links & Lys

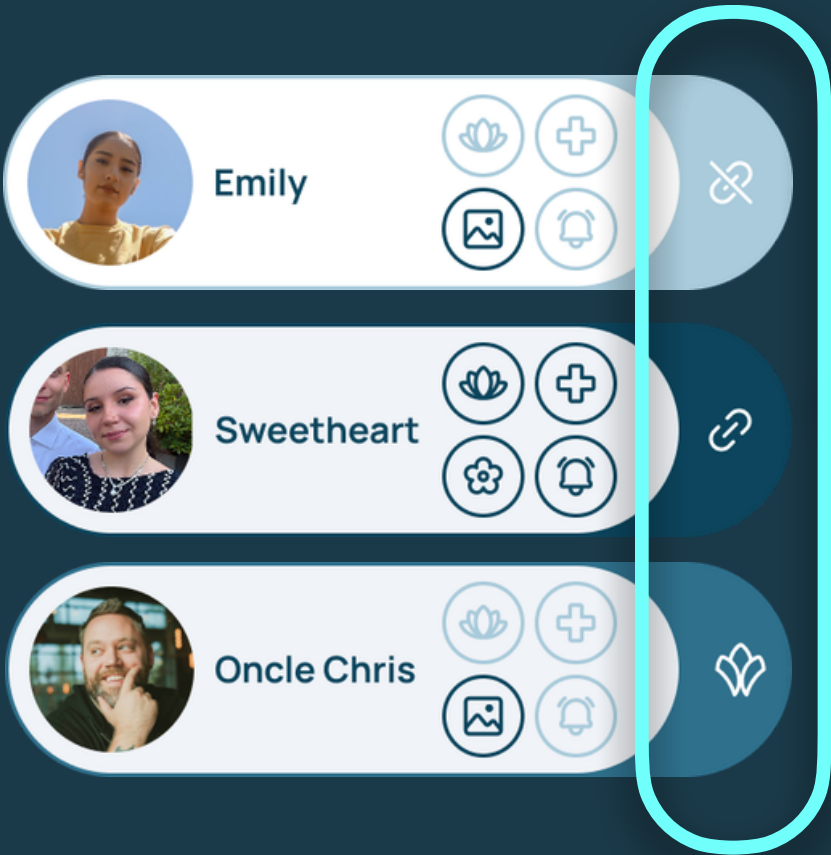

In Norwegian,

“Hylest” means the tribute we pay.

“Lys” means the light we leave behind.

At Hylest, each capsule exists according to its connection state.

Some are still waiting, others are connected, and some take the form of Lys – short messages, carriers of words meant to illuminate those who receive them.

The 3 connection states

Unlinked Capsules

These capsules already have a recipient's name, but are not yet linked to them.

They allow you to write, prepare, and safely store a message for later – or even choose never to link it.

« A personal, free space, waiting to be united with its heir... »

Linked Capsules

These capsules are linked from the start to the person you have chosen – your heir.

They have no limits: you can enrich them at any time, add files, videos, or simply leave words that matter.

Even when linked, capsules remain fully editable, evolving over time. They welcome anything that may help those who remain: a memory, a password, an explanation, a reference point, proof of love...

« These are the major capsules – the ones that transmit what truly matters. »

Lys

Lys are short capsules. Included with every Hylest account, they share the same attributes as a standard link – except they are limited to 365 words. They are meant to carry a thought, a word that brings light and guidance...

This limitation is intentional: it invites focus on the essential, to say only what truly matters, freely.

« A “I love you”, a “thank you”, a gentle thought. Lys are the lights we leave behind, to guide those we love... »

Controlled capsule opening

Manually "Express Request"

You can appoint one or more **trusted persons**.

They are granted the right to trigger an **"Express Request"** — a controlled, traceable opening process that unfolds over 48 hours.

This feature acts as a **human relay**: it is activated only when the user **is no longer able to respond personally**, and helps prevent a capsule from taking longer than necessary to open via the automatic Ender mode.

Automatically "Ender", the digital oracle

Ender is Hylest's AI-assisted digital oracle. Its role is to ensure that each capsule opens **at the right time and for the right person**.

When Ender detects **unusual behavior** or a **prolonged lack of activity**, it initiates a **verification sequence** with the user. Several messages, spaced over time, are sent to confirm their status and presence.

Ender never opens a capsule without having first attempted multiple verifications with the user. This process can extend over several months, in order to avoid any accidental, premature, or unwanted opening.

In the total absence of response after repeated attempts, the application does what it was designed to do: **authorize the opening** of the capsule, in accordance with the rules previously defined by the user within Hylest.

Regarding sequencing, the opening process is **spread over several weeks**, following predefined opening orders based on family relationship. This is designed to prevent any accidental or inappropriate opening. For example: with default settings, **a friend's capsule will never open before a partner's**, but six weeks later. (This setting remains fully adjustable within the app.)

Security & Compliance

Sovereign hosting (EU)

Your capsules are hosted in Europe by **OVHcloud** and **Scaleway**, major European cloud providers certified ISO 27001 and HDS. Hylest is supported within their **startup programs**, ensuring robust infrastructure and priority support.

Encryption & certification (today)

- At rest: platform-side **AES-256** encryption.
- In transit: **TLS 1.3** (HTTPS) between your devices and our services.
- Internal access: strict access controls, logging, and least-privilege principles.
- Compliance: **GDPR** (EU), **ISO 27001**, **HDS** (FR healthcare), **CCPA/CPRA** (USA),
- DPO, access traceability, data retention and deletion policies.
- Transparency: you can export and delete your data at any time.
- **Privacy by Design**

Encryption (tomorrow) – optional

End-to-end encryption (E2EE) — coming soon for users who choose it:

- Client-side encryption/decryption (on your devices),
- Keys held by the user (“**zero-knowledge**” mode for Hylest),
- Configurable per capsule,
- Optional “**no recovery**” mode (irreversible) for ultra-sensitive cases.

In practice : Your data is stored encrypted on our infrastructure. No plaintext access is possible during service operations — not even by Hylest.

Ecosystem & Partners

Hylest relies on a European ecosystem of excellence, combining security, sovereignty, and innovation. Our mission is to build a trusted technology, hosted in Europe and certified to the highest standards.

OVHcloud & Scaleway

Two leading European players in sovereign cloud infrastructure.

Certified ISO 27001 and HDS, they ensure the secure hosting of Hylest capsules and support Hylest through their Startup Partner programs.

A guarantee of stability, performance, and international compliance.

An innovation network

Hylest is supported by an ecosystem of public and private stakeholders: incubators, support structures, and innovation organizations.

These partnerships strengthen our vision of a useful, human-centered, and sustainable technology.

A sovereign approach

All development and data storage are operated on European infrastructures.

Hylest advocates for an ethical and sovereign approach to digital technology: no data exploitation, no transfers outside a secure legal jurisdiction.

Hylest Plans

A subscription, yes – but not for life*

Free

\$0 /month

For the curious – and so our children can receive our messages for free.

- **1 Lys included (i.e. 1 recipient)****
- **Unlimited received capsules**, (you can receive as many capsules as you wish)
- **250 MB of storage included** (approx. 100–200 photos)

Starter

\$0,99 /month*

To go further.
Up to 13 recipients

- **3 links (i.e. 3 recipients)**
- **10 Lys included**
- **Unlimited received capsules**
- **2 GB of storage included** (over 500–1,500 photos or more than 1 hour of video)

Premium

\$2,99 /mounth*

To transmit without limits.
Up to 30 recipients

- **10 links (i.e. 10 recipients)**
- **20 Lys included**
- **Unlimited received capsules**
- **10 GB of storage included** (over 5,000 photos or more than 5 hours of video)

* The value of a link is approximately \$70. You can pay in a single payment or monthly until fully paid.. Example: Starter plan with 3 links Pay \$200 once, or \$0.99/month for 20 yearly periods (total \$237). Once the total amount is paid, no further payments are required. Access to your capsules is guaranteed for life, with no additional fees. ** Lys have the same properties as standard links but are limited to 365 words.

Vision & Impact

More than a message — a trace...

We all leave **fragments** behind us: words, images, decisions, secrets. Hylest exists so that none of these fragments are lost — and so they are passed on **at the right moment, to the person who matters to you.**

Preparing a capsule is not about thinking of the end: it is about offering continuity, avoiding silence, and lightening and enriching the lives of those who remain.

Let us place memory — the kind that has meaning, that connects, that guides — back at the center. Each capsule is proof that technology can be **human, useful, and respectful of privacy.**

Our ambition

To make Hylest the European reference for **post-transmission digital connection**: a simple, ethical, and sovereign application, serving families, caregivers, adventurers, and all those who wish to leave a clear trace.

Hylest
An application designed to make LIFE easier.

Our advice...

Be bold.
Leap.
Love.
Life fully .

But first, write a
message to your family.
