Compact buffer tank for extra water volume

The Hydrun Buffer Vessel 50 l (HY-A-E-PC-50-20) is a compact buffer vessel that provides additional water volume in heating and cooling systems more stable operation. It helps smooth out temperature and flow variations, reduce short cycling, and ensure smoother operation of the system.

Stable operation

A compact vessel that helps to even out temperature and flow variations.

Robust expansion

Handles temperatures between -10 and 70°C.

System fluids

The vessels are well suited for systems containing glycol and ethanol.

Impact resistant and durable

The containers are impact-resistant and can withstand temperatures up to 70°C.

Model name	HY-A-E-PC-50-20
Previous name	Pressure equalization vessel + service valve 50 liters
Previous item no.	HL1109
Volume	50 liters
Pre-pressure	1.5 bar
Max operating pressure	8 bar
operating temperature	-10 to 70°C
Connection	DN20
Diameter	365 mm
Height	582 mm
Media	Water, glycol, and ethanol
