

Healthcare Innovation Center

Physician Shared Telemedicine Platform (PC3 Connect)

- Subject Matter Experts and IT professionals will integrate existing telemedicine visual communication technology with newly devised digital solutions and information systems.
- The resulting system will allow for complete visual remote encounters with effective record keeping.
- End users will perform longitudinal patient record analysis, continuity of care, auditing, and the corresponding billing for each telehealth service.

About PC3:

- PC3 is a cloud-based collaboration platform where hospitals, medical insurance companies, and physicians can share data in an interactive, secure, and real-time manner.
- PC3© is a SaaS ("software as a service") that utilizes Microsoft Azure Cloud Services.
- Using PC3©, service providers and insurance companies can share data among each other and with the patient in an interactive and realtime manner to have access to each other's data, among many other functionalities.
- Data could be collected from all providers and aggregated at the patient level.

Data may include:

- Lab results
- Radiology results
- Hospital discharge summaries
- Clinical data from Physician's offices.
- Claims
- Star ratings
- Medical orders
- Prescriptions
