

# Hold-Down Conversion Kit

Reliable tooth engagement to help hold mechanical levelers in place for safe loading procedures.

Hold-down device underneath a Rite-Hite® mechanical leveler.

Components of hold-down system: 9-tooth pawl, ratchet bar and tension relief chain and system.

9-tooth pawl.

## Reliable Safety

- » Reliable 9-tooth engagement helps reduce operator injuries or damage to a leveler that could pop up into the air due to failure of a less reliable hold-down.
- » Strong tension relief and positioning of dock leveler hold-down assembly in the front and center of the leveler helps to provide a smoother ride for forklift drivers by keeping the leveler parallel with the trailer bed floor.

## Lower Lifetime Ownership Costs

- » Dock leveler tension relief system helps protect the hold-down system and leveler subframe from damage and costly repairs for a longer product life by relieving upward pressure applied by rising trailer beds. This is critical in the trending use of air-ride suspension trailers.
- » Quality machined teeth minimize premature chipping, allowing for ease of tension relief and increased product life.
- » Hold-down system is made up of two corrosion resistant parts: 1/1/2" wide, crown-tooth cadmium plated ratchet bar and 9-tooth pawl; allowing for strong holding power for longer life and less wear.

## Universal Kit

Universally accepted on competitive and Rite-Hite® mechanical levelers.

## Industry Leading Warranty

Rite-Hite hold-down conversion kit offers a standard warranty of 1-year parts and labor.
