*Free to academic labs of up to 5 users.
All users have access to the full Pro functionality for a 30-day free trial.

Lab Thread is a simple, secure digital thread that connects your lab's data, team and workflows, enhancing collaboration, supporting reproducibility & continuity, and ensuring compliance.

Its intuitive, user-friendly interface is designed to make collaboration – and scientists' lives – easier.

Core features and benefits

Collaboration

Send comments, copies of ELNs, sequences, designs or samples to colleagues, or share with view only, edit or full control rights.

Stable Cell Line Development

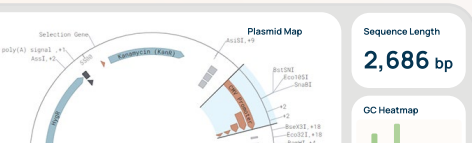

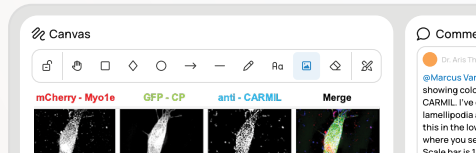

Intuitive Project Management

Projects are the knot that ties your digital thread together, connecting molecular designs, ELN entries, and sample storage into a single connected record.

Smart ELN

Arrange figures, work directly within Excel spreadsheets and add electronic signatures, dates and timestamps to flexible ELN templates.

Advanced Molecular Biology

Native cloning, primer design, alignment and visualisation tools and digital simulations support rigorous experimental planning.

Equipment & Sample Tracking

Tether every physical sample to its original sequence, cell line or "parent" sample, the protocol that created it, and its physical location within the freezer.
