Hitch the tractor to an implement or trailer in under 30 seconds without leaving the cab.

Saint-Étienne-sur-Chalaronne, France – May 27, 2021 - Farmers in France have already started seeing the efficiency gains from SIWI's Combi-Hitch. This product, now available in France through Oria Agriculture sas, allows operators to easily switch between a variety of tractors, trailers, implements and other machinery on the farm. Connecting and disconnecting equipment can be time consuming and unproductive, but Combi-Hitch enables the operator to do it in a matter of seconds.

"Combi-Hitch is a welcome product in the French market. We see that due to field size and the variety of different farm operations, a significant amount of time is spent connecting and disconnecting machinery", said Danae Armstrong of Oria Agriculture. "Farmers not only see cost savings from machinery and labour, but also have a safer working environment."

SIWI Maskiner is a Danish company that has been designing and manufacturing quick hitch systems since 2012. The product is flexible and can be fitted to a wide variety of machinery including trailers, spreaders, seeders, feed mixers, etc. Once installed, the operator just backs up to the trailer or implement and connects without leaving the tractor cab.

"Our typical customers are farms and contractors who want to be able to do a lot of jobs with one tractor and one operator", said Steen N. Jensen, Sales and Marketing Director at SIWI. "We are pleased to be working with Oria Agriculture in the French market. They mirror the sales and technical support values that SIWI is known for."
