Respected Sir / Madam,

Subject: Disclosure under Regulation 30 of SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015 – Press Release

In terms of Regulation 30 of SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015, please find enclosed the Press Release regarding the Launch of 100% Make-in-India Automated Empty Shell Production Line. The details of the same are furnished in the attached Press Release.

The above information will also be available on the website of the Company at https://www.baluindustries.com/.

Kindly take the above information on your record.

Thanking You,
Yours Truly,

For Balu Forge Industries Limited

Jaspalsingh Chandock
Managing Director
DIN 00813218

Encl: As above.

Balu Forge Launches 100% Make-in-India Automated Empty Shell Production Line in Belgaum

- **Delivers 360,000 shells annually, powered by near-100% automation and FANUC Robotics**
- **Belgaum facility to roll out multiple precision engineering lines in phased expansion**
- **Strengthens India's Atmanirbhar Bharat defence ecosystem.**

Mumbai, Wednesday, 10th December 2025: Balu Forge Industries Ltd (Balu Forge or the Company) (BSE: 531112 | NSE: BALUFORGE), a precision engineering company engaged in the manufacturing of forged and machined components, has commenced operations of its empty shell production line - one of the first 100% indigenously built production line in India - at its greenfield manufacturing campus in Belgaum, Karnataka. The line with an annual production capacity of 360,000 shells has an advanced forging and machining line for large calibre ammunition projectiles.

The empty shell production line enhances Balu Forge's capability to deliver advanced machining solutions for critical applications in the defence industry. The company has plans to further expand the production line to meet the global and domestic demand.

The entire forging line has achieved near 100% automation powered by FANUC Robotics which makes it one of the most advanced both in India and the global defence manufacturing market.

The entire production line has been designed in-house. Over 18 machinery manufacturers were involved in designing, developing and commercialising the 100% Make in India production line. The complete forging line is unmanned and it has been programmed and commissioned in-house with a cycle time of 55 seconds.

This development aligns with Balu Forge's long-term strategy to expand its precision engineering portfolio across industries and geographies with continued emphasis on supplying fully machined components. This is a part of the Company's plan to commercialise its greenfield facility in Belgaum, Karnataka. In addition, Balu Forge is also working towards rolling out a number of high precision production lines in a phased manner in the near future, driving the government's *Atmanirbhar Bharat* mission and serving the Indian defence industry.

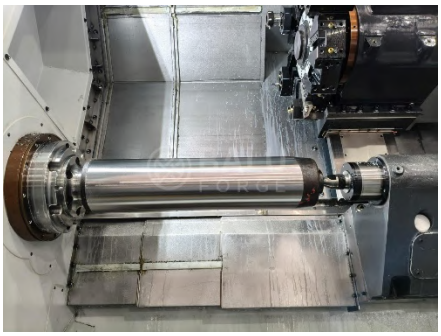

Commenting on the commercialization, Trimaan Chandock, Executive Director at Balu Forge said: *"This advanced empty shell production line opens a new category for us, reflecting our outlook to diversify our capability in the large calibre ammunition projectile category servicing not only 155 mm empty shells but also 120 mm, 105 mm, 81 mm, etc., amongst others. It is an important milestone for us, as our 100% indigenously developed production line is driven by advanced automation technology. The complete forging production line is unmanned, representing an important technological achievement for both our company and the Indian defence industry. This is only the first phase of our long-term vision to grow our contribution to the Indian defence production. We will continue to expand our production capability with high-precision offerings, going forward."*

About Balu Forge Industries:

Balu Forge Industries Limited, founded by Mr. Prehlad Singh Chandock, is a leading Indian precision engineering company delivering forged and machined components across multiple global industries. The company offers a comprehensive product portfolio ranging from 1 kg to 1,500 kg and up to 3 meters in length, supporting diverse applications in automotive, industrial vehicles, earthmoving equipment, wind energy, aerospace, defence, oil and gas, railways, marine, and agriculture. Its operations include fully integrated forging and machining capabilities, with advanced manufacturing facilities in Belgaum, Karnataka, spread over a 46+ acre campus. Equipped with high-capacity hydraulic hammers and forging presses, and supported by a dedicated in-house tool room, metallurgical labs, and CNC machining units, Balu Forge ensures consistent precision and quality. The company's strategy is driven by innovation, with a specialized R&D

division focusing on new materials and rapid prototyping. Strategic initiatives emphasize expanding defence production, enhancing automation, and strengthening global partnerships. With a strong focus on operational scalability, customer diversification, and ESG commitments, Balu Forge continues to strengthen its global footprint and industry positioning.
