Insurity

Pro Suite

Stop bending a core system around specialty, and use one built for it.

Insurity Pro Suite is a cloud native platform built for complex specialty business. It brings underwriting, bureau and proprietary rating, policy, billing, and claims onto a single system so you can run specialty as one business.

40%	65%	45%
Lower total cost of ownership	Less time billing and tracking payments	Less time issuing and managing policies

No multi-year re-platforming project needed.

Pro Suite gives specialty carriers one modern platform to run the book, see the risk, and defend the results.

What Pro Suite changes for your specialty lines:

One view of how the book is really performing

- Specialty data across admitted and non-admitted, bureau and E&S sits on one backbone
- See premium, loss, and profitability by program, carrier paper, broker, or segment without a data project
- Spot accumulations, leakage, and underperforming niches before they blow up a quarter

Underwriters can prioritize high-value, in-appetite submissions

- Appetite, authority, and compliance rules enforced for every underwriter
- Bureau and proprietary rating, documentation, and referrals in a single experience
- Improve hit ratios with key brokers, faster yes/no on complex risks, and more predictable loss ratios because “one off” decisions stop slipping through

Finance, risk, and underwriting finally see the same numbers

- Specialty policy, billing, and claims share a single system of record
- Subledger and operational reporting feed your corporate GL and stat reporting cleanly
- Close faster deals that regulators, reinsurers, and rating agencies can follow without extra homework
